Job Application Efficiency Dashboard

Last Modified on 10/29/2026 8:45 am CDT

This dashboard honors User restrictions based on login Location.

Purpose

The Job Application Efficiency dashboard gives the ability to track how many hours the Applicators spend applying product, how much time Applicators spend waiting on product being delivered to complete their job, and how much time they spend traveling between jobs. This helps make decisions on how to add efficiencies to their custom application, thus decreasing costs, increasing customer satisfaction, etc.

Job in progress / Applicator moving = Working
Job in progress / Applicator idle = Waiting
Job not in progress / Applicator moving = Traveling

Only jobs that were completed by an Applicator whose geographic location was tracked via the Agvance Ops app are included in this dashboard.

Details

A quick overview of all metrics helps in understanding the overall happenings.

The *Breakdown by Hours* section helps relate contribution on different aspects of *Traveling*, *Waiting*, and *Working*.

The *Activity* line chart shows the trend, and the bottom section helps with Applicator and Vehicle movement.

Filter by *Beginning/Ending Date*, *Location ID*, *Vehicle ID*, and/or *Applicator ID*.
