# Mapping Metrics Dashboard

Last Modified on 03/25/2025 9:28 am CDT

Purpose

The Mapping Metrics dashboard can be used to determine usage statistics of Recs and Field Events in SKY Mapping.

Details

This dashboard honors user restrictions based on login location.

The Mapping Metrics dashboard gives the ability to look at two metrics across the dashboard between Total Event/Recommendation Acres involved or the number of Events/Recommendations. It is possible to view Event/Recommendation by User, Location, and Field. This also provides the ability to look at Event/Recommendation Type vs. Sub Type.

Use the Event/Recommendation trend to understand busy periods.
