## **Booking Offers**

Last Modified on 07/05/2023 8:10 am CDT

A tool in Accounting to create mass Bookings, located at *Accounting / Utilities / Booking Offers*, gives the ability to gather information to subsequently mass-create Bookings for non-budget tanks as well as any product offered on Bookings.

The Load Set/Save Set capabilities are available and remember the values in the grid. This can be exported to an external file to create contracts so offers can be distributed. Upon being accepted, the **Load Set** can be used to recall information and create a Booking from selected lines.

1. On the Setup tab, choose Select by Select Customers to specify for whom a Booking is being entered or select

0010	ect Customers	Cls Select	Cust. Clas	5		
Pr	oking Information roduct			Dates		
<	Default Product>	⊻ Use	e tank history	Date 01/25/2023		
D	ept ID	Prod ID		End 02/28/2023

	Start Date	End Date	Include	Heating Degree Days ▽		
	01/01/2022	12/31/2022		5508.70		
	01/01/2021	12/31/2021 🧹		5005.20		
5						

Cust. Class. to choose a Customer Classification.

- 2. Checking the *Use tank history* option gives the ability to enter five date ranges. Three of those ranges can be used to calculate the quantity and Heating Degree Days. Enter the *Start Date* and *End Date* and choose *Include* if applicable.
- 3. With Use tank history unchecked, selecting a Location from the Location drop-down populates dates on the Create tab for that Location's tanks and posts the Booking in the Location selected. When Use tank history IS checked, dates will be populated for all tanks and the Booking will be posted to the tank Location.
- 4. A *Default Product* can be chosen by double-clicking in that field. This product will be used on the Booking created.
- 5. Choose **Save Set** and enter a *Description* to remember options chosen here. When ready to recall the information, select **Load Set**.
- On the *Create* tab, select **Preview** to display Bookings matching criteria set on the *Setup* tab.
  Note: Tanks displaying here are only those not set up with a Budget Billing cycle.
- 7. Enter the Quantity for the product.

 Enter a unit price or double-click in the <Unit \$> field to choose a price. This price can by applied to all in the grid by right-clicking and selecting Copy Down. If a Price Level is selected, this will be indicated in the Level column.

- 9. Check the Post column to create a Booking for that customer. Selecting Tag All will select all customers.
- 10. Choose Create Bookings. A confirmation message will display giving the range of Bookings created.
