Each column has a 'Filter' button below its header. The grid contains 12 rows of data. The 6th row is highlighted with a blue background and a 'Priority 2' label. The 6th row data is: Ticket N... 261, Priority 2, Customer Anderson, Barry, Farm Barry's Wir..., Field Wire East, Area 60.5 Acres, VRT X, Crop (blank), Crop Chemistry (blank), Ship Via (blank), Re (blank). - **Pin** – Select the **Pin** button to choose columns to remain frozen when scrolling horizontally.
- **Hide** – The **Hide** button can be selected to choose columns to hide/show in the grid.
- **Export** – Select **Export** to export the grid to Excel or CSV.
- **Ellipsis** – Options to *Reset Grid* to original settings and *AutoFit Columns* are available under the **Ellipsis**.
- **Move** – Columns can be moved by selecting a column heading then dragging and dropping in the desired location.
- **Resize** – Hover over the border between column headings then select and drag to change the size of the column or double-click that border to autofit.
- **Sort** – The **Arrows** in each column heading can be selected to sort by that column (ascending or descending). This feature offers a multi-level sort giving the ability to sort multiple columns at once with a hierarchy applied. For example, sorting by Customer THEN by Field sorts customers alphabetically THEN Fields alphabetically.
