Applicators - Agvance SKY Dispatch

Last Modified on 11/04/2026 9:48 am CST

Applicators can be viewed and added on the *Applicators* tab under *Company Assets*. Add, edit, deactivate, and update Agvance Ops app permissions for Applicators from this area.

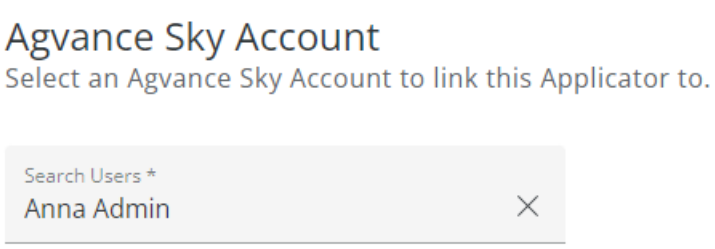

The Applicator grid operates much like an Excel spreadsheet. Columns with a Checkmark indicate the feature/option is enabled, and an *X* signifies it is not for that Applicator.

Update Inventory	Require Conditions	Edit Ticket	Capture Signature	Choose Conditions Profile
Filter	Filter	Filter	Filter	Filter

Add Applicators

New Applicators can be added by selecting the +**Add Applicators** icon found in the lower right-hand corner of the window.

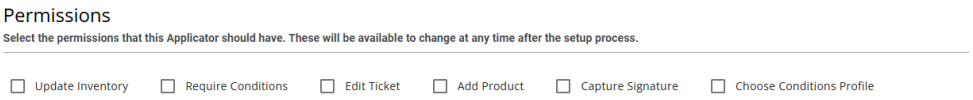

1. Select the *Agvance SKY Account* from the drop-down.

2. Choose the *Agvance Applicator* from the drop-down. This selection cannot be changed after finishing the setup process.

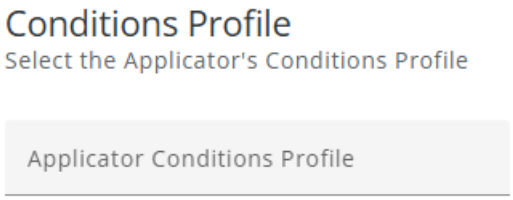

3. Indicate *Permissions* for this Applicator.

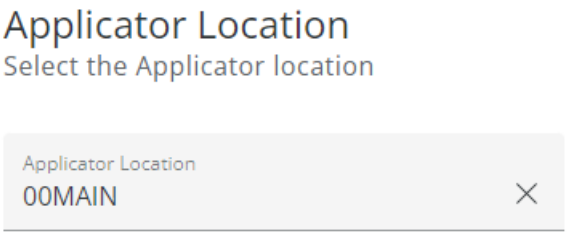

Note: The *Choose Conditions Profile* option allows the Applicator to choose the *Available Condition Profile* in the Agvance Ops app.

4. Indicate the Applicator's *Conditions Profile* from the drop-down.

5. Choose the Applicator's *Location*.

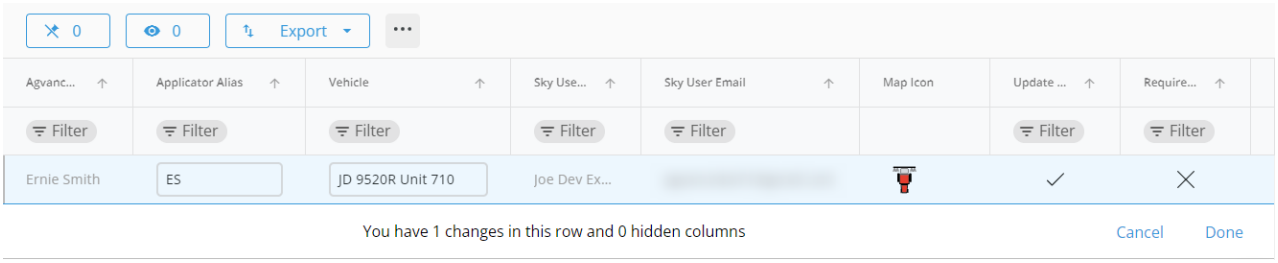

6. Enter an *Applicator Alias* and choose the *Map Icon*. A preview is available to see what the Applicator will look like on the map.

7. Select **Save Applicator** when finished.

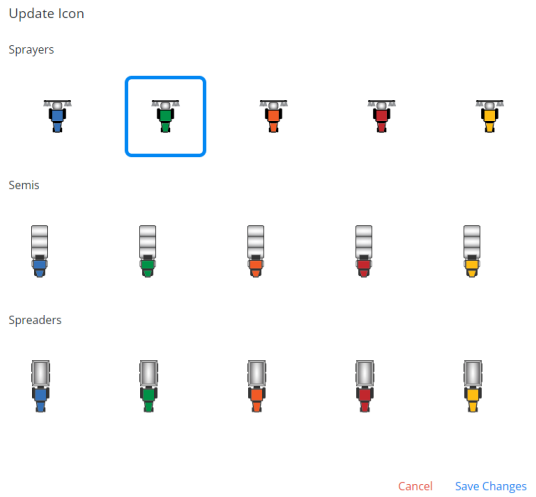

Editing Applicators

The following columns can be edited in the grid by double-clicking an editable cell to enter *Edit* mode.

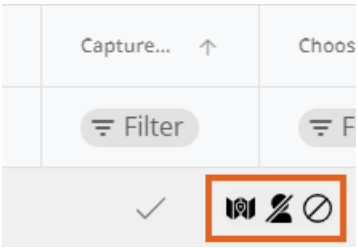

The number of changes being made can be seen below the row being modified. When finished editing, select **Done**.

- **Applicator Alias** – Enter or edit the alias.
- **Vehicle** – Choose the Vehicle from the drop-down. Start typing to narrow down the list.
- **Map Icon** – Select the current icon to open the *Update Icon* window. Choose a new icon and select **Save Changes**.

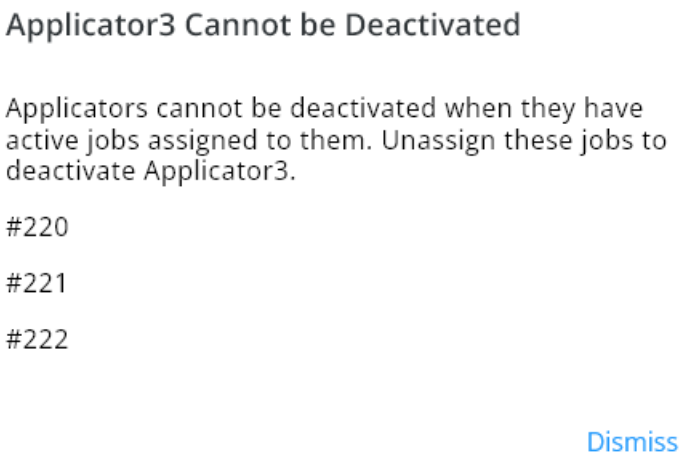

- **Update Inventory** – Checking this box will mark unloaded tickets as *Loaded* and will update inventory amounts when an applicator completes a job.
- **Require Conditions** – Controls whether Conditions set to Required must be filled out. When enabled, Required Conditions display with an asterisk (*) in Agvance Ops and must have a value before the job can be completed. When disabled, Required Conditions are treated as Optional and can be left blank. Conditions set to Off or Optional work the same either way.

- **Edit Ticket** – With this checked, Applicators can change the number of acres and recalculate the total product.
- **Add Product –** Allows the Applicator to add new Products to a ticket in Agvance Ops. When disabled, the Applicator can still edit existing Products but cannot add new ones.
- **Capture Signature** – A signature will be required when completing a job after finalizing conditions when this permission is checked.
- **Choose Conditions Profile** – Applicators with this option checked have the ability to choose the Conditions Profile in the Agvance Ops app.
- **Applicator Location** – Select the *Location* from the drop-down.
- **Available Conditions Profile** – Choose the *Available Conditions Profile* from the drop-down. These must already be set up by selecting **Setup Available Conditions Profile** above the grid.
- **Applicator Options** – Hover over the Applicator line to *View Location History*, *Deactivate Applicator*, or *Unassign All Jobs*.

  - Applicators cannot be deactivated if active jobs are assigned to them.

  - Selecting **View Location History** opens a map view with the option to filter by *Location History Date*, *Start Time*, and *End Time*. Once filters are entered and applied, breadcrumbs display to show the Applicator's history.

Applicator Permissions

These permissions control what the Applicator can do in the Agvance Ops app.

- **Update Inventory –** Marks unloaded tickets as Loaded and updates inventory amounts when the Applicator completes a job. This works on its own, so Applicators can mark tickets as Loaded even when *Edit Ticket* is not enabled.
- **Require Conditions –** Controls whether Conditions set to Required must be filled out. When enabled, Required Conditions display with an asterisk (*) in Agvance Ops and must have a value before the job can be completed. When disabled, Required Conditions are treated as Optional and can be left blank. Conditions set to Off or Optional work the same either way.
- **Edit Ticket –** Allows the Applicator to change the number of acres and recalculate the total product.
- **Add Product –** Allows the Applicator to add new Products to a ticket in Agvance Ops. When disabled, the Applicator can still edit existing Products but cannot add new ones.
- **Capture Signature –** Requires a signature when completing a job, after Conditions are finalized.
- **Choose Conditions Profile –** Allows the Applicator to select their own Conditions Profile in the Agvance Ops app.

Note: Whether each Condition is Off, Optional, or Required is set on the Default tab or in a Condition Profile.
