Drivers - SKY Dispatch

Last Modified on 07/07/2026 8:55 am CDT

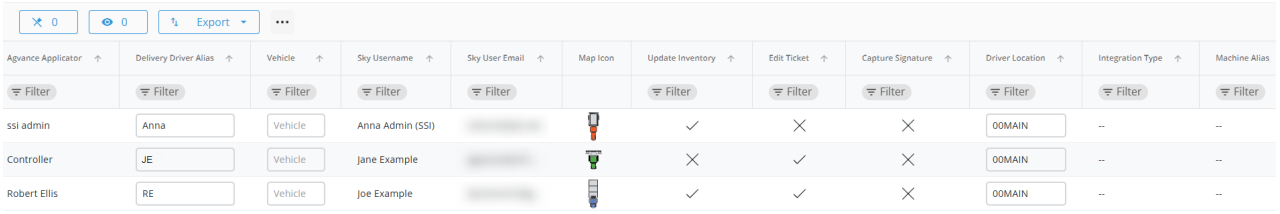

Drivers can be viewed/edited on the *Agvance Ops* tab under *Company Settings*.

Switch between Applicators and Drivers by choosing the **Ellipsis** on the search bar and selecting the appropriate *User Type*.

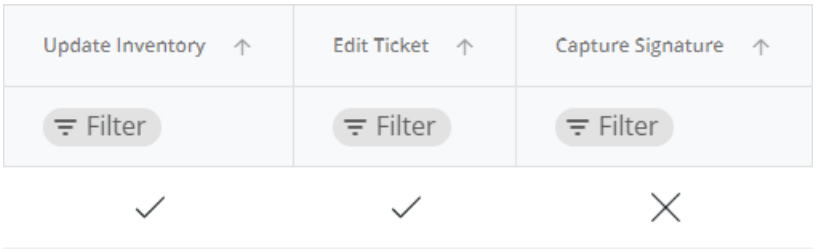

Add, edit, and deactivate Drivers and/or update Agvance Ops app permissions.

The *Applicator* grid operates much like an Excel spreadsheet. For more on how this grid functions, see **Using Grids in Agvance SKY**.

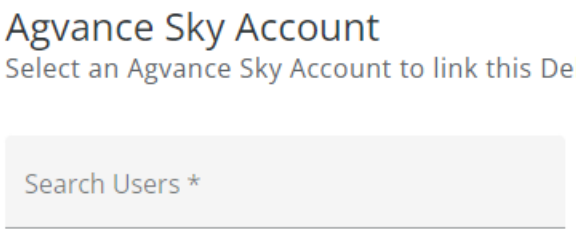

Columns with a *Checkmark* indicate that permission is enabled and an X signifies it is not.

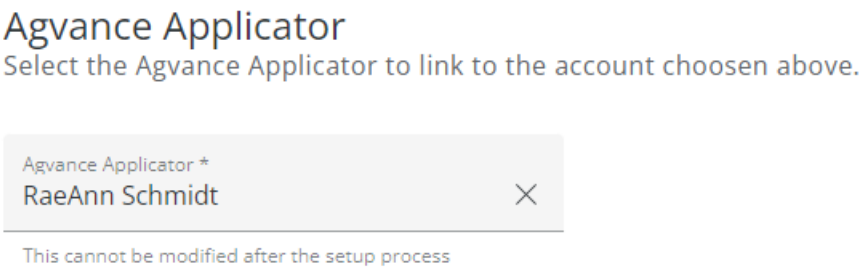

Add Drivers

New drivers can be added by selecting the+ icon found in the lower right-hand corner of the window.

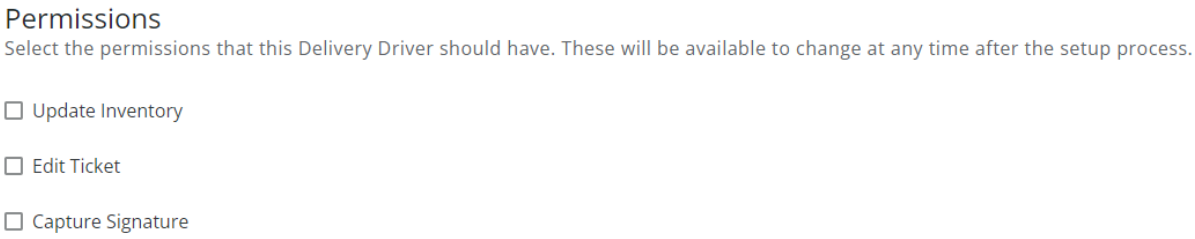

1. Select the *User* from the drop-down.

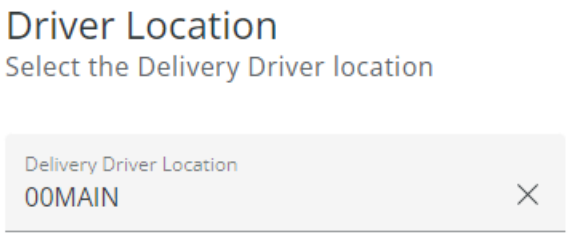

2. Choose the *Agvance Applicator* from the drop-down. This selection cannot be changed after finishing the setup process.

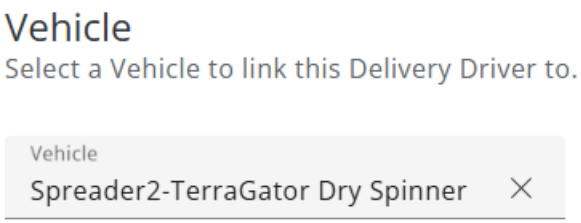

3. Indicate *Permissions* for this Driver.

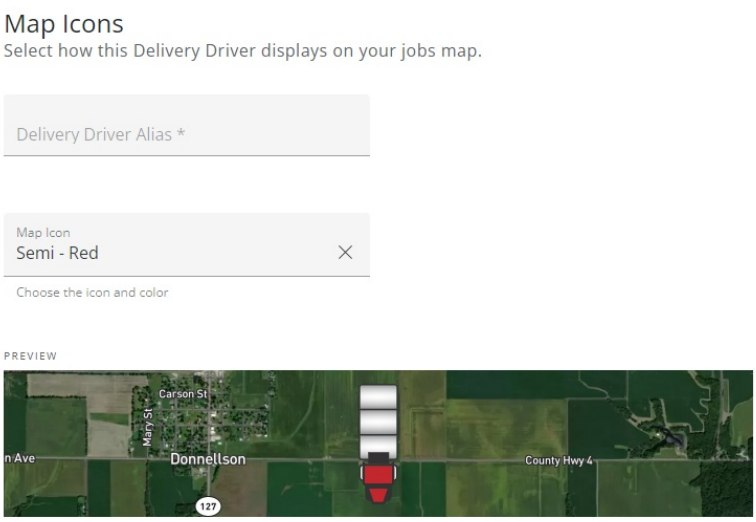

4. Select the *Delivery Driver Location* from the drop-down.

5. Choose the *Vehicle* from the drop-down.

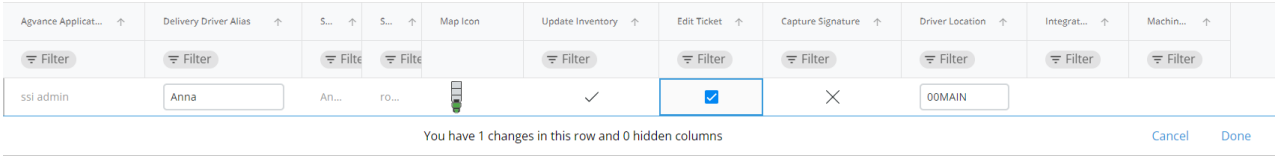

6. Enter a *Delivery Driver Alias* and choose the *Map Icon*. A preview is available to see what the applicator will look like on the map.

7. Select **Save Delivery Driver** when finished.

Editing Drivers

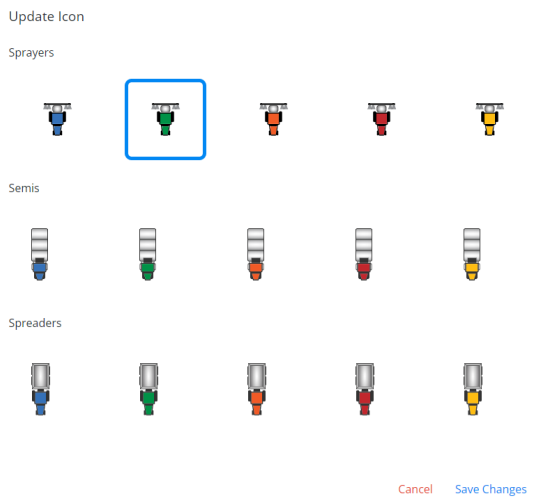

Some items in the grid can be edited. In order to do this, double-click a cell in the line item to be edited.

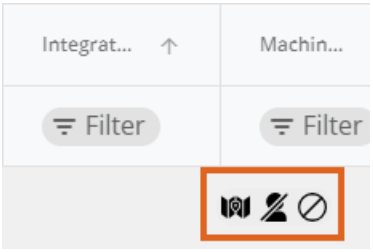

After making a change, select another cell in the grid to update the number of changes displaying in the *You have # changes in this row and 0 hidden columns* information. After all changes have been made press the **Enter** key on the keyboard or select **Done** on the right to save the changes. To discard changes and close out of *Edit* mode, select **Cancel**.

The following columns can be edited in the grid:

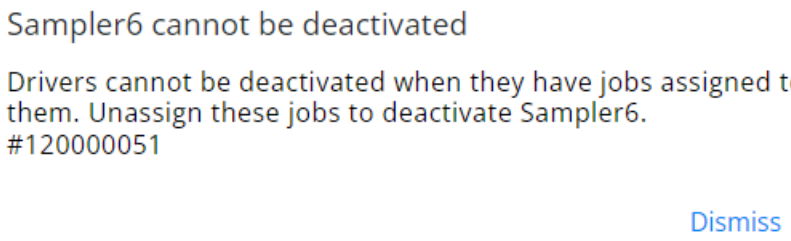

- **Delivery Driver Alias** – Double-click in the text field to enter or edit the alias.
- **Map Icon** – Select the current icon to open the *Update Icon* window. Choose a new icon and select **Save Changes**.

- **Update Inventory** – Checking this box will mark unloaded tickets as *Loaded* and will update inventory amounts when a Driver completes a job.
- **Edit Ticket** – With this checked, Drivers can change the number of acres and recalculate the total product.
- **Capture Signature** – A signature will be required when completing a job when this permission is checked.
- **Driver Options** – Hover over the Driver line to *View Location History*, *Deactivate Driver*, or *Unassign All Jobs*.

Note: Drivers cannot be deactivated if active jobs with active Fields are assigned to them.

Selecting **View Location History** opens a map view with the option to filter by *Location History Date*, *Start Time*, and *End Time*. Once filters are entered and applied, breadcrumbs display to show the Driver's history.
