Futures Month Pricing - Agvance SKY Grain

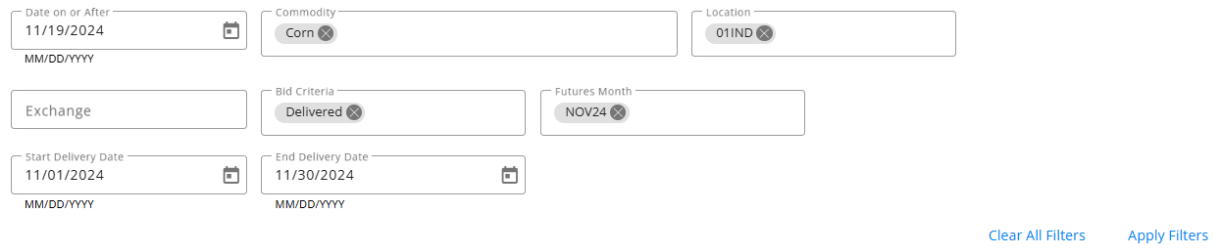

Last Modified on 08/05/2026 12:55 pm CDT

The *Futures Month Pricing* tab under *Futures* in Agvance SKY Grain can be used to review and set up Futures Months/Pricing.

Note: Futures Month Pricing is only available to those who have the Role permission enabled in **Agvance SKY Admin**.

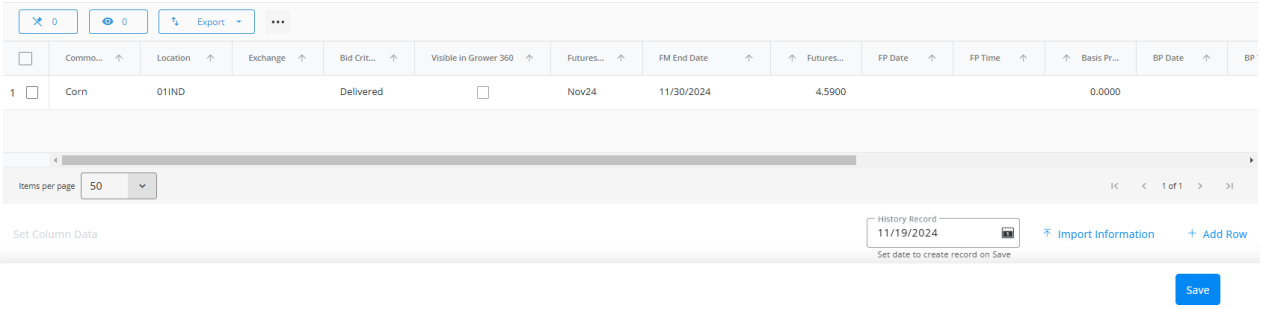

Filtering

Under the *Filtering* section, set the criteria to narrow down the items displaying in the grid below. Once filters are set, select **Apply Filters**. **Clear All Filters** can be selected to reset the filters selected.

Setup Futures Months/Pricing

Futures Months/Pricing is available in this grid. The grid operates much like an Excel spreadsheet. To see more on grid functionality, see **Using Grids in Agvance SKY**.

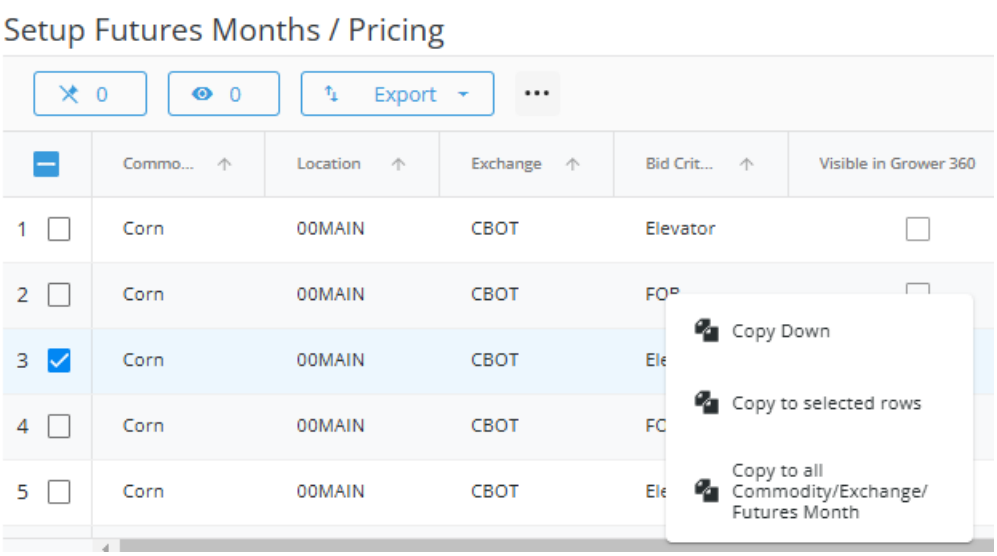

If using Grower360, the cash bid visibility can be determined with the *Visible in Grower360* checkbox.

Note: The company must be using Barchart and not DTN for this functionality.

New lines can be added to this grid by selecting **+ Add Row** then double-clicking in a cell to enter *Edit* mode. Once all information has been added, select **Done**.

Right-Click Options

Some right-click options are available within the grid.

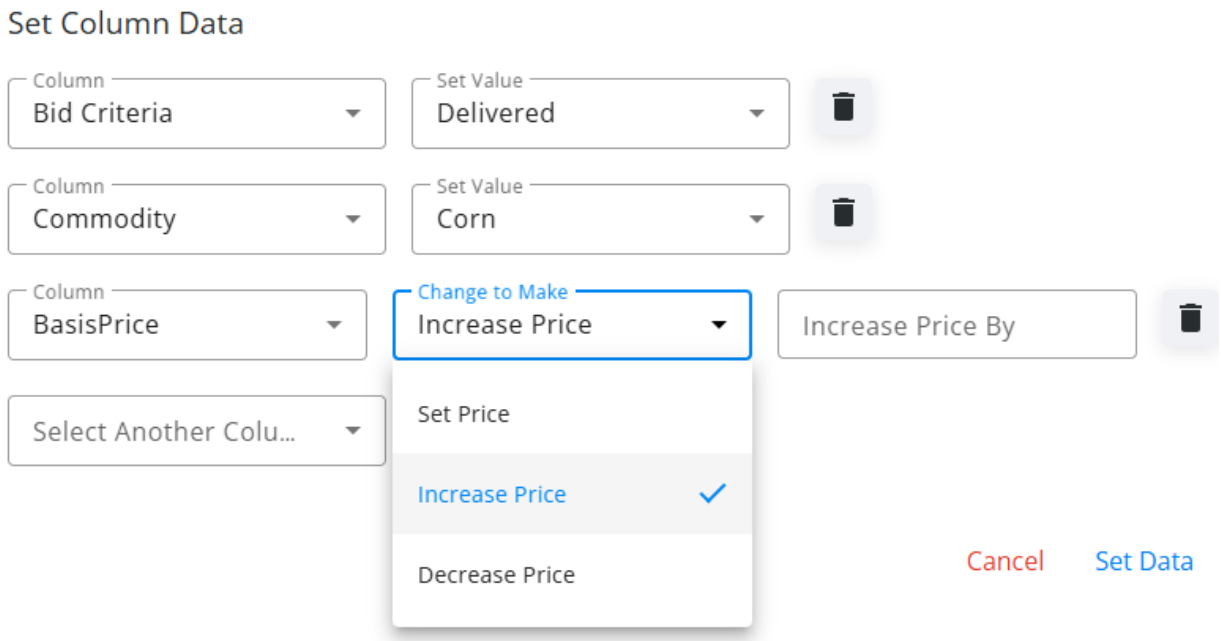

- **Copy Down** – This copies the highlighted cell to all rows in grid below that cell.
- **Copy to selected rows** – This copies the highlighted cell to rows in the grid that have been checked.
- **Copy to all Commodity/Exchange/Futures Month** – This copies just the highlighted cells to all rows in the grid with the same Commodity/Exchange/Futures Month.

Set Column Data

With at least one row checked, select **Set Column Data** to populate columns in bulk. This is especially helpful if adding multiple rows at a time. Choose the *Set Value* for the *Column* indicated and select **Set Data**.

For *FuturesPrice* and *BasisPrice*, options available are *Set Price*, *Increase Price*, or *Decrease Price*. *Set Price* changes the value in the column to the value entered. *Increase* and *Decrease Price* takes into account the current value and increases or decreases that value by the amount entered.

Alternatively, choose **Import Information**. A window displays where one .txt file can be dragged and dropped or choose browse to find the text file. Select **Import** to upload the information to the grid. Be sure to review the data for accuracy.

A *History Record* date can be set to create a record upon selecting **Save**.

When finished making changes, select **Save** in the bottom right.
