External Data Sources and Analytics

Last Modified on 05/20/2024 3:36 pm CDT

Spreadsheets or other documents can be used as a data source within Analytics to build reports/dashboards. Data from the spreadsheet will need to be blended with data from Agvance.

External Data Source

To use an external data source (like Excel), if Tableau Desktop is accessible and the data source is to be built in Tableau, the Tableau data source file can be sent to SSI to be published at no charge. The data must be blended with Agvance data on the dashboard.

Spreadsheet of Data

If a spreadsheet of data is given to SSI to be used in Tableau, there is a charge to create the data source using that Excel data. Please contact SSI Sales for more information.
