Delivery Jobs in Map View - Agvance SKY Dispatch

Last Modified on 07/07/2026 8:32 am CDT

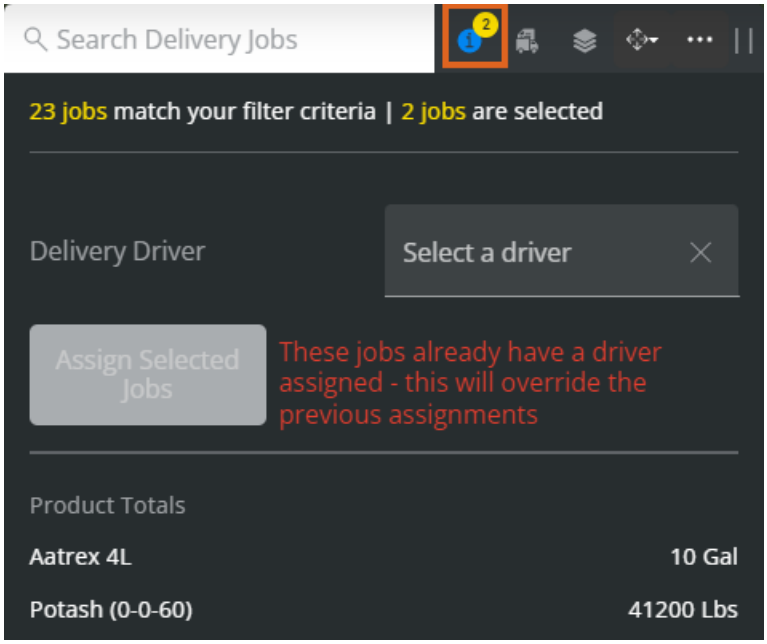

It is recommended to display the *Schedules* tab and *Map* tab using dual monitors as they work in conjunction with one another. Use the *Filters* menu or *Search* field to narrow down jobs and the *Viewing* menu to switch between Blend and Delivery Tickets.

Quick Filters set up under ***Personalize*** can be selected from the *Quick Filters* menu in the bottom navigation. Quick Filters give the ability to apply multiple filter criteria at one time.

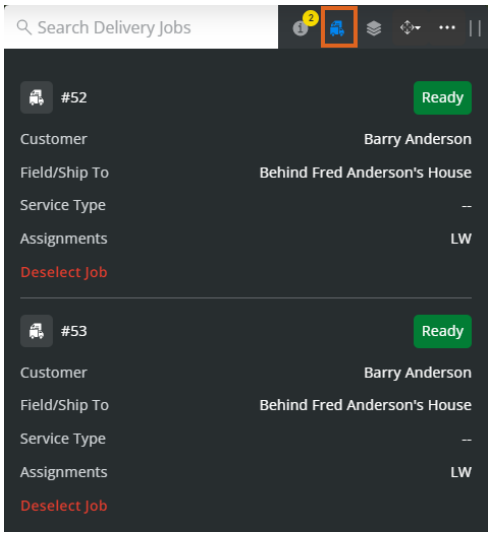

Search Bar

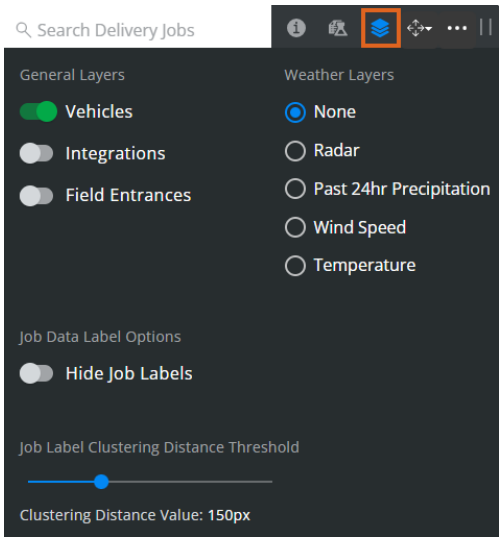

- **More Information** – This displays information for all selected jobs including *Product Totals*. *Delivery Drivers* can be indicated for Delivery Tickets here as well.

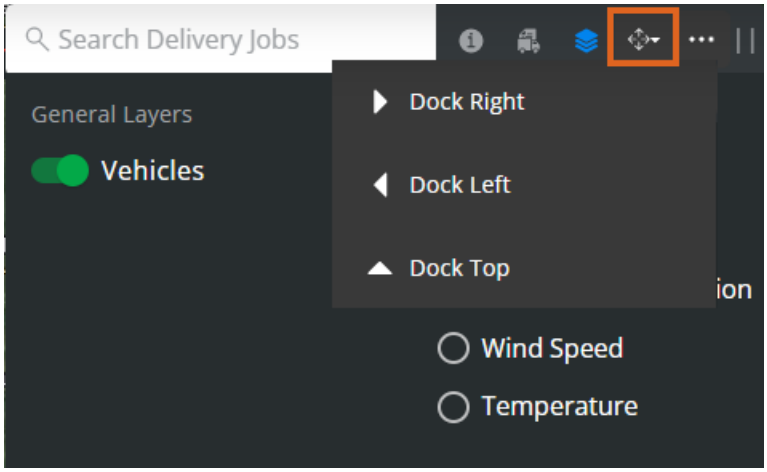

- **Selected Job Information** – View information related to the selected job(s).

- **Show Layers Panel** – This area provides display options for *General Layers*, *Weather Layers*, and *Job Data Label Options*. Use the *Job Label Clustering Distance Threshold* to determine the number of labels appearing on the map.

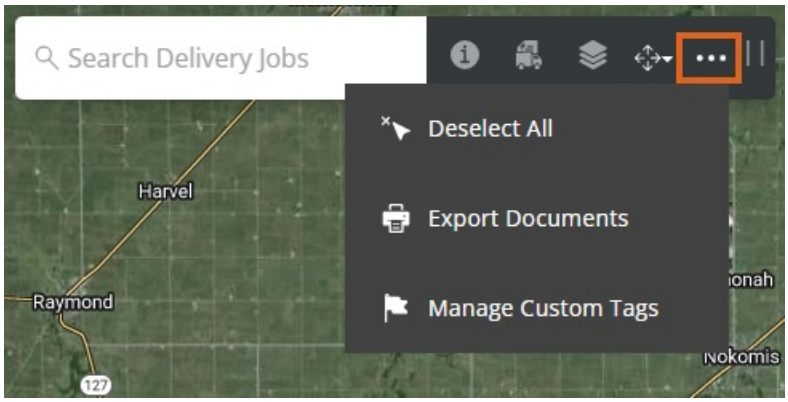

- **Dock Search Bar** – Dock the search bar to the right, left, or top of the screen.

- **More Options** – Choose the **Ellipsis** to *Deselect All*, *Manage Custom Tags*, *Save/Print Bill of Lading(s)*, or

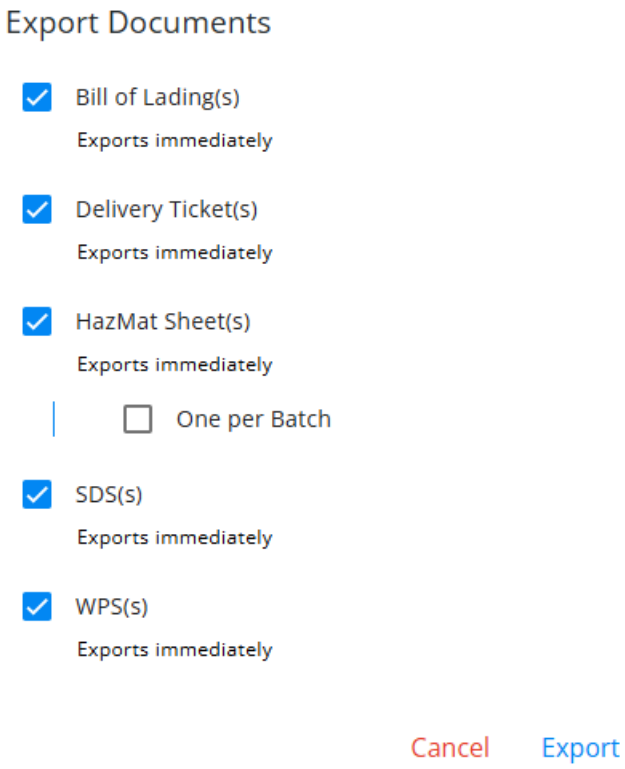

Save/Print Delivery Ticket(s).

- Selecting **Export Documents** gives the option to export *Bill of Lading(s)*, *Delivery Ticket(s)*, *HazMat Sheet(s)*, *SDS(s)*, and/or *WPS(s)* as PDFs.

  If multiple Delivery Tickets are selected, one PDF will open with each Delivery Ticket and/or Bill of Lading having its own page in the file. Additionally, jobs will be displayed in the order they are selected.

  Note: An established Agrian link is required to export SDS and WPS documents.

- Choosing **Manage Custom Tags** gives the ability to add or remove Custom Tags per job(s) selected.

- **Drag Search Bar** – Select and drag to move the search bar to a different area.

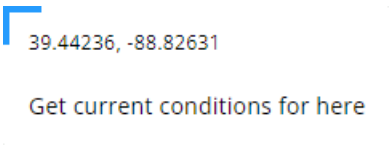

Map

The *Map* window displays real time updates of Applicator locations and job clusters. This information can be viewed in either *Map* or *Satellite* view.

Field boundary colors can be customized on the *General* tab in ***Company Settings***.

Jobs can be selected either by selecting the job on the *List View* window or by using the mouse scroll wheel to zoom in on a field boundary. Selecting the field or *Customer/Field* label selects that job.

Selecting an area on the map and holding or right-clicking gives the ability to see current weather conditions for that precise location.

A message displays on the map informing the number of Blend Jobs with no geo-coded Fields.

Turn on the *Vehicles* option to view the progress of specific jobs. Applicator icons display to show location. After 6 hours of being inactive, the icon is removed. Breadcrumbs will display on the map.

Global Layers from Agvance SKY Mapping display on the map.
