Accounting

Inventory

- **FTM-4016 / Shipping Order Manager** – The *Select Shipping Order Manager* window remembers the column selected to sort by and the sort order (ascending/descending) while editing Shipping Orders as long as the *Select Shipping Order Manager* window is not closed. If the window is closed and then re-opened, the column selected to sort by will be remembered if *Make This Layout My Default* is selected; however, the sort order is not remembered.

Accounting Reports

- **FTM-4015 / Product Reference List** – The Reference List report at *Accounting Reports / Inventory / Products* now includes the Product's GTIN in the Custom Export for the *Basic* style.
