Accounting

Inventory

- **FTM-3978 / Record Delivery Tickets as Loaded** – The Record Delivery Tickets as Loaded utility at *Accounting / Inventory* now checks the Loaded status of the ticket when saving to prevent double posting. If the ticket was posted after the list was loaded, a message displays indicating the ticket was already loaded. This prevents a duplicate record from being saved.

Accounting Reports

- **FTM-4055 / GST/PST Combo Statement** – The standard Combo Statement (French and English versions) now displays the GST/PST in the same manner as the Invoice document.

Grain

- **FTM-3996 / Grain Locations** – Only Grain Locations will be saved to the database when posting the DPR at *End of Periods / DPR Posting* or *Grain Reports / Daily Position Reports / Combined DPR/TPR* and using the *Update DPR* option.

Hub

Utilities

- **FTM-3980 / Transfer to Field History** – The Transfer to Field History utility at *Hub / Utilities* will load in memory the setup information per Location and group like transactions together by ticket to transfer more efficiently.
