

# Forecasting Tool - SKY Product

Last Modified on 01/21/2025 7:25 am CST

Use the Forecasting Tool in SKY Product to manually input or modify forecasted inventory quantities. These will be stored over a 12 period timeline within a filterable database to assist with future purchasing decisions.

Input Products and quantities to generate a forecasting report.

## Overview

In the Overview section, choose the *Location* and *Year*, then choose **Apply**.

### Overview

Enter Location and Year

Location SSI Farm Services - IL	Year 2024	Apply
------------------------------------	--------------	-------

## Products

In the Products section, search for and add Products for the report by selecting **Search Products**. A **grid** of Products display. Use the checkboxes to indicate which Products to include.

Use the **Filters** button below the **X** to search within a specific *Location/Department*. The button next to the **Filters** button can be selected to show which Products have been checked. The number on this button indicates how many Products are currently selected.
