Forecasting Tool - SKY Product

Use the Forecasting Tool in SKY Product to manually input or modify forecasted inventory quantities. These will be stored over a 12 period timeline within a filterable database to assist with future purchasing decisions.

Input Products and quantities to generate a forecasting report.

Overview

In the *Overview* section, choose the *Location* and *Year*, then choose **Apply**.

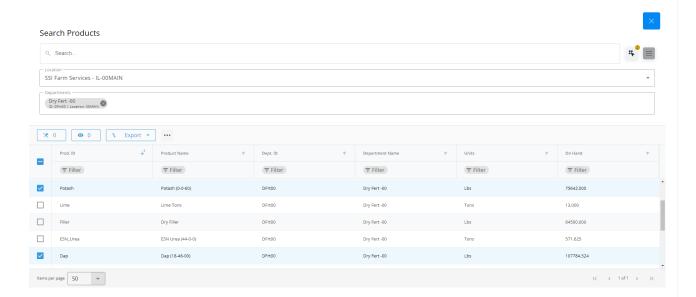

Products

In the Products section, search for and add Products for the report by selecting **Search Products**. A **grid** of Products display. Use the checkboxes to indicate which Products to include.

Use the **Filters** button below the **X** to search within a specific *Location/Department*. The button next to the **Filters** button can be selected to show which Products have been checked. The number on this button indicates how many Products are currently selected.

Once Products have been checked, select the **X** to close the window.

In the *Products* grid that displays, enter the *Quantity* (quantities expected to be sold) for each month. To remove a

Product from this grid, choose the **Delete** icon. **Clear Row** can be selected to zero out each month for that Product. As *Quantities* are entered, the *Sum of Months* column updates with a running balance.

Product Name	Prod. ID	Dept. ID	Amount on Hand	Sum of Months	Month 1	Mo...	Mo...	Mo...	Mo...	Mo...	Mo...	Mo...	Mo...	Mo...	Mo...	Mo...		
Dap (18-46-0...	Dap	DFrt00	107,784,524 Lbs	1,706	Quantity 100.000												🗑	Clear Row
Potash (0-0-...	Potash	DFrt00	75,642 Lbs	--	Quantity	(	(	(	(	(	(	(	(	(	(	(	🗑	Clear Row

When finished entering *Quantities*, select **Save**.
