January 2025 SKY Release Notes

Last Modified on 01/29/2025 8:20 am CST

Admin

- **GRAIN-457 / Contact Support Options** – Determine which **Contact Support buttons** (SSI Support or internal) are available on the SKY homepage at *SKY Admin / Utilities*.

Customer

- **SKYW-3265 / Edit Customer Information** – Customer account information can be edited from the Customer's *Overview* tab if the permission to edit has been enabled for the SKY User logged in.

Dispatch

- **SKYC-1914 / MyJohnDeere** – Link and send VRT files to MyJohnDeere accounts from SKY Dispatch. For more information, see **MyJohnDeere**.
- **SKYC-3308 / Slingshot** – Send files to Applicators through Slingshot in SKY Dispatch. For more information, see **Slingshot**.

Grower360

- **SKYW-4279 / Last Delivered Tank %** – The value displayed in the *Tank %* column on the *Energy* page and the *Estimated Tank Fill Percentage* on the *Energy Tank Info* page in Grower360 are now the percent at the time of the last delivery.

Mapping

Version 5.01

Web

- **HW-9186 / Import Sampling** – Surfacing of Sampling Events works as expected.
- **HW-11020 / Lab Submission Form/Sample Bag Labels Date Filter** – The *Start Date* and *End Date* in *Report Options* have been changed. If either or both are set, the *Season* drop-down is disabled. If only the *Start Date* is

set, all Sampling Events with a *Start Date* equal to or after that date are included in the report. If only setting an *End Date*, all Sampling Events with a *Start Date* equal to or before that date is included in the report. If both are set, all Sampling Events between the two dates are included in the report.

- **HW-11530 / SKY Yield By Report** – A new, branded report called SKY Yield By was created. Each imported Harvest Event is an individual report and includes the standard *Report Options* of *Season*, *Start/End Date*, *Crop*, *Base Map*, and *Custom Imagery*. *Coverage* and *Polygon* options are included as well as a **Compare By Options** link with page selection.

- **HW-11646 / SKY Boundary Map** – The SKY Boundary Map treats shared split lines within a boundary part as separate polygons, thus placing the label at the centroid of the larger field part.

- **HW-11775 / Import Planting** – Importing planting data and creating an Event and surface works as expected.

- **HW-11800 / Equation Recs Attribute Same Testing Type Different Units** – Creating Equation Recs on specific data surfaces as expected.

- **HW-11816 / Import Harvest** – Data can be imported and surfaced as expected.

Mobile

- **HW-10166 / Reports Search Selection** – Selecting the **Add Report** option no longer displays the *Field* search and Base Map icons.

- **HW-11533 / Date Control Display with Keyboard Open** – The *Date* control displays the entire month so any day can be selected within the month.

- **HW-11587 / Customer/Field Search** – When a matching text string has been found for a Field, the matching Customer's accordion is expanded.

- **HW-11677 / Field Setup** – Editing Field boundaries that have cultivated or uncultivated areas works as expected. Additionally, when deleting all vertices of an internal part, the internal part is deleted as expected.

- **HW-11754 / SKY Yield By** – A new, branded report called SKY Yield By was created. Each imported Harvest Event is an individual report and includes the standard *Report Options* of *Season*, *Start/End Date*, *Crop*, *Base Map*, and *Custom Imagery*. *Coverage* and *Polygon* options are also included.

Version 5.00

Web

- **HW-6220 / Import Sampling No Results Templates** – The No Results Sampling templates support Event Date mapping and save the Event Date as expected with the Event.

- **HW-8631 / Import Sampling CSV** – Importing CSV Sampling files upload and process as expected when there are leading and/or trailing spaces in the column headers.

- **HW-11516 / Automated Sampling Results Imports** – Automated Sampling Results imports work as

expected.

- **HW-11532 / IoT Messaging** – The application works as expected without having to refresh.
- **HW-11618 / Auto Import Equipment Matching** – The Auto Import process works as expected when a different Owner has a matching Equipment with the same Monitor ID.
- **HW-11619 / Auto Import** – The Auto Import function works as expected with specific data.
- **HW-11629 / Imported/Manual Events** – Micro zones can be created on manual Events and surface as expected.
- **HW-11651 / Import Application Blends** – Importing application data works as expected.
- **HW-11653 / Import Sampling** – Importing spatial sampling data works as expected.
- **HW-11655 / Import Sampling Soil Type Surfaces** – Sampling Event surfacing on specific Fields with outdated Soil Type surfaces works as expected.
- **HW-11657 / Field Setup** – Field edits work as expected.
- **HW-11689 / Sampling Email Import CSV Files** – The Sampling Email Import for results only data of multiple sample results per Event using CSV files works as expected.
- **HW-11690 / Sampling CSV Files** – CSV files can be imported as expected.
- **HW-11699 / Import Harvest Data** – Importing Harvest data works as expected.
- **HW-11785 / Import Row Level Planting Data** – Importing Row Level Planting data works as expected.
- **HW-11797 / Import Harvest** – Harvest data imports and completes surfacing as expected.
- **HW-11805 / Report Books Cover Page** – The Report Books *Cover Page* option displays within Report Books as expected.

Mobile

- **HW-9543 / Field/Feature Messaging** – A new message was added to the *Select a Customer* screen stating *You are required to download a Customer* to ensure a Customer is downloaded in order to add a Field and Non-Field Features. If offline, a message displays stating *You must be online to add a Field without any Customers*.
- **HW-10993 / Sampling Collection with Results Setting** – The Allow Collection with Results setting works as expected.
- **HW-11010 / Field Setup Manual Cross Intersecting** – Cross-intersecting lines behave like self-intersections where the **Finish** icon is disabled and the boundary displays the invalid parts using the standard red symbology.
- **HW-11015 / Field Setup Offline** – Offline deletions are treated like online deletions and previously deleted boundaries are permitted to overlap and use the same name during the same offline session.
- **HW-11637 / SKY Boundary Map** – The SKY Boundary Map report works as expected.
- **HW-11656 / Field Setup Polygons** – Adding internal polygons to a Field works as expected.

Vendor

- **SV-2022 / AP PO Auto-Numbering** – Choose the *PO Numbering Location* when adding an **AP PO** in SKY Vendor to determine the Location used for Purchase Order auto-numbering.
