

API 7.0.27130 | 01.28.2025

Last Modified on 01/29/2025 9:23 am CST

- **FTM-4211 / Add Unique Identifier Address Returned** – The API GetCustomerAddress can now be filtered by the last modified data.
- **FTM-4213 / Get LpTank/GetLpTankInfo Last Modified** – A new table was added, LpTankAudit, which is populated by adding and editing Tanks. API LpTank GET now has a new filter for *Last Modified On or After* which uses the new LpTankAudit table entries to filter which tanks are returned. Pagination has also been added to this endpoint. *LastModified* will only be set when a Tank is added or when items on the Tank's *Profile* tab are changed.
- **FTM-4272 / PutInventoryReceived** – PutInventoryReceived now alerts if the wrong unique ID is entered and honors company-wide department matches.
