

February 2025 SKY Release Notes

Last Modified on 02/05/2025 7:03 am CST

Mapping

Version 5.02

Web

- **HW-9507 / Zone Tools** – The Zone tools now work as expected and the ability of the Union tool has been expanded to allow combining and dissolving two non-adjacent zones. When the Union tool is active and a Zone is selected the next Zone selected is assigned to the same class regardless of its location within the field. The Legend class acres are updated accordingly (increasing in one class and lowering in another).
- **HW-11054 / Import Monitor Files** – The Monitor Files - Onsite template processing remains during the Processing File status as expected.
- **HW-11111 / Field Setup Clip Adjacent Fields** – When double-clicking to finalize a new polygon part, if the polygon overlaps another Field's boundary of the same Customer, a prompt, *Overlap Detected*, is displayed. New options include *Clip to Other Field*, *Update Other Field*, and *Cancel*.
- **HW-11628 / Loadsheet Multi-Field Rec Report Option** – A standalone, fixed user preference for the multi-Field Rec report option for the Loadsheet report was added independent of the Export Controller preferences.
- **HW-11652 / SKY Crop Planning Crop Zone** – The *Crop Zone* report option for the SKY Crop Planning report properly classifies Crop, Crop Purpose, or Crop Chemistry and includes the appropriate legend class and color on the same map page when the *Farm and Grower Per Page Options* are used.
- **HW-11765 / Auto Import Sampling** – Emailing results-only MODUS files works as expected.
- **HW-11792 / Export Controller Falcon Dealer ID Option** – When exporting a Rec in the *Export Controller* area, if AGCO is selected for the *Controller Company* and *Falcon (*.tiff)* for the *Controller Format*, a new textbox allows a 6-digit *Dealer ID* to be entered. This defaults to 123456 but a fixed preference allows the default value to be changed.
- **HW-11815 / Yield Calibration** – The Total Yield calibration displays as expected.
- **HW-11817 / SKY Recs Report Application** – The SKY Recs Report - Application handles multiple parameters and multiple Event data on the *Report* page as expected.
- **HW-11847 / Multiple Report Types** – The web and mobile app supports creating multiple report types at once and selected in any order as expected.

Mobile

- **HW-11659 / Measure Tools Area** – A new **Measure** icon was added that displays below the **GPS** icon on the home screen. When selected, a list of three options appear in the *Measure Type* list: *Area*, *Area-Freehand*, and *Area-Track*. The new tools enable area measurement using select, freehand, and GPS techniques. *Area* unit options include *acres* (default) and *square feet*. *Line* unit options include *feet* (default) and *miles*.
