

March 2025 SKY Release Notes

Last Modified on 04/11/2025 8:16 am CDT

Analytics

- **AN-3133 / MN Restricted Use Sales Dashboard** – The [MN Restricted Use Sales](#) dashboard is now available under *Agronomy* in SKY Analytics and displays restricted-use Products on Invoices where the Field on the Invoice, Ship To, or Grower's state is MN.
- **AN-3221 / Seed Sales Reporting** – The [Seed Sales Reporting](#) dashboard under *Admin* is used for reporting seed sales.

Energy

- **SKYR-582 / Tank Pricing Details**– Ability to add *Pricing* details to a tank in SKY Energy.
- **SKYR-579 / Tank Profile Detail Fields**– Billing Comments and tank Description fields have been added to the Add Tank form.
- **SKYR-661 / Agvance Data Informational Banner** – As an Agvance and Energy Force customer, a notification displays in SKY Energy on the Daily Fuel page that SKY Energy is currently showing Agvance Data only.
- **SKYR-704 / Last Read Column** – *Last Read* column for monitored tanks has been added to the *Tanks* grid.

Mapping

Version 5.05

Web

- **HW-9660 / Analysis Layers Benchmark Normalized Yield** – The new *Normalized Yield - Benchmark* Batch Analysis Layer supports single or multiple Harvest Events and Fields to create a Batch Analysis Layer. At least one imported Harvest Event is required, and selected Fields without a selected imported Harvest Event will be ignored. When used, a prompt displays to indicate a Layer name and number of classes. A new *Benchmark* section lists each Crop for the selected Harvest Events. A *Benchmark Yield* textbox is displayed next to each Crop and defaults on the weighted average yield across all selected imported Harvest Events per Crop. The Benchmark Yield can be edited to override the default value. If edited, the *Normalized Yield - Benchmark* analysis uses the benchmark values for the 100% threshold rather than the per Event average the

typical Normalized Yield uses. Options of *Edit, Delete, Print,* and *Create Event/Rec* are available.

- **HW-11819 / Import Harvest** – Importing Harvest data works as expected.
- **HW-11960 / SKY Soil Test Report** – The SKY Soil Test report works as expected.

Mobile

- **HW-11914 / Add/Update Field** – Adding and updating Fields work as expected.

Version 5.04

Web

- **HW-11778 / SKY Grower Summary - Planting Report** – A new report called SKY Grower Summary - Planting is now available. This report has the usual options of *Season, Crop,* and *Start and End Date* and supports Planting Rec (Equation and Manual) recommendations. This is a per Customer report and is sorted by *Customer, Farm, Field,* and *Rec Name*. Like other reports, there are *Per Page Options* used to determine page breaks (Farm or Field). A *Cost Details* option is available and provides *Price/Unit, Total Cost,* and *Cost/Acre,* with the *Price* and *Cost* of each Variety within the selected Planting Recs. This report was also added to Report Books.
- **HW-11799 / Customer Setup Agvance Integration** – Marking a Customer as *Inactive* in an Agvance-connected Owner works as expected.
- **HW-11823 / Org Level Quick Changer** – A new feature was implemented in the Org Level Quick Changer giving the ability to select a Location before choosing a Customer. With this change, searching for all Customers from parent Org Levels is now possible and there is support for selecting between Org Levels as necessary.
- **HW-11845 / Auto Import Manual Events** – The Auto Import process works as expected and does not attempt to validate against Manual Events for all Event Types (Application, Planting, and Harvest).
- **HW-11924 / Import Boundary** – Importing boundary files works as expected.
- **HW-11969 / Import Events** – Event data resurfaces as expected.

Mobile

- **HW-11752 / Measure Tools Lat/Long and Line** – Three new options were added to *Measurement Tools* (*Lat/Long, Line,* and *Line-Track*). These tools give the ability to measure the length of lines, length of GPS-tracked lines, and their Latitude and Longitude.
- **HW-11802 / Field Setup Tracking Undo Option** – A new **Undo** option has been implemented. When choosing **Pause** during a Field boundary Track session, each selection of **Undo** removes the most recently tracked vertices. Upon selecting **Resume**, tracking continues from the last logged point that was not removed. Tracking Splits is supported as well as tracking of Non-Field Features, Field Features, Scouting Sites, and Zones.

- **HW-11835 / Un-synced Edits Revert** – A new swipe option of **Revert** was added to the *Un-synced Edits* page. Selecting **Revert** displays a prompt stating *This will remove the edit that is causing the sync error. Would you like to continue?* Choosing **Continue** proceeds and removes the edit causing the sync error. Selecting **Cancel** returns to the *Un-synced Edits* page.

Note: If the sync error was an add rather than an edit, the prompt that displays is updated with *add* replacing *edit*.

My SKY Account

- **SKYW-4105 / Email Notifications** – **SKY notifications** can now be sent via email under My SKY Account.

Order

- **SKYD-108 / Add Plans/Blends** – The **Blends** and **Plans** forms have been revamped to make visual enhancements as well as improve efficiency.

Product

- **SV-2128 / Forecasting Tool Product Filters** – In the *Products* grid that displays after searching for and selecting Products, filters are available to specify specific *Departments, Classifications, Active Ingredients, and/or Manufacturers*.
- **SV-2166 / Products List** – A listing of Products can be viewed in SKY Product.
