Mapping April 2025

Version 5.08

Web

- **HW-6051 / Sampling Select/Deselect Zones** – The current extent of the view is not changed when creating or editing a Sampling Event as expected.

- **HW-11770 / Import Application Product Mix Name** – The Product or Product Mix name was added to the Event strip for imported Application Events. The Product Mix is now visible and searchable across Application Events.
  Note: Manual Products are not included.

- **HW-11821 / Field Setup Resurfacing Non-Data Zone** – When the Field boundary area extent is modified (e.g., using Zone Tools) and the new area becomes an *Other* Zone Class, surfacing is extended to these areas. This defaults to an excluded/unselected area (Soil Sampling and Analysis Layers).

- **HW-11947 / Field Setup Copy Event** – When the Field boundary is reduced in size and an Event from the old boundary is copied, the copy process fits the Zones to the current Field boundary.

- **HW-12022 / Equation Recs Event Selection** – Equation Recs can be created at any Org Level with large Owners as expected.

Mobile

- **HW-11782 / Keep Recent Values in All Value List** – New mobile drop-down logic was implemented so that all drop-down items within the ALL list are retained. Additionally, a *Search* option was added for Report Types.

- **HW-11836 / Sampling Auto Collection** – Selecting **Done** or Cancel during a Sampling Event cancels the Auto Collect Pending process, avoiding the *Unsaved Edit* status.

- **HW-11968 / Poor Connection** – The *Configure Points* step works as expected during poor network connectivity.

- **HW-11996 / Lab Submission Form** – The Lab Submission Form *Report Options* display as expected.

- **HW-12045 / Mobile Sync** – The mobile sync process works as expected.

Version 5.07

Web

- **HW-11769 / Field Setup Lock Boundary** – Locks can be placed on high-accuracy Field boundaries to prevent editing. When the new Lock Boundary User Role is active, a *Lock Boundary* checkbox is displayed on the Field profile to the right of the *Field Name*. This checkbox is hidden for those who do not have the Lock Boundary

User Role active. When this is checked, the Draw tools and all other Field edit icons (**Delete**, **Undo**, **Redo**, **Import**, and **CLU**) are unavailable, so Field boundaries on the map are not editable. A Locked icon is shown to the right of the Acres in the Field profile header. The boundary edit block also applies to User who do not have the Lock Boundary User Role active. The *Edit Boundary* menu is disabled for Locked Boundaries within the *Event Import* wizard. When a new Field overlap is detected and one of the overlapped Fields is locked, a warning is displayed, and the action is canceled.

- **HW-11997 / Export Controller Edit File Names** – The *Export Controller File* area for the *Edit File Names* feature now scrolls when the list of Recs becomes longer than the screen display.

Mobile

- **HW-9323 / Non-Field Features** – A new entry was added to the *Base Map* area called *Non-Field Features* which is accessible through the **Info** icon located above the **GPS** icon. Defaulting as enabled, this option gives the ability to disable Non-Field Features' shapes and labels from the map.

Version 5.06

Web

- **HW-11948 / Imagery Setup Number of Classes** – A new *No. of Classes* drop-down was added to the *Imagery Setup* panel. The default is five Classes, but this can be adjusted between two and 15 Classes. Adjusting the number of Classes adjusts all NDVI surfaces within that Imagery Setup.
- **HW-11959 / Field Section Report Options** – An accordion was added for each Report Type when more than one Report Type is selected, allowing for unique Report Options per Report Type.
- **HW-11964 / SKY Crop Planning/SKY Yield Map Report** – The SKY Crop Planning and SKY Planting Summary reports work as expected when the *Summary* page is greater than one page in length. Additionally, the SKY Yield Map page breaks work as expected. Furthermore, the Customer was added to the PDF File name for all Report Books when *Individual Report Book* is not checked.
- **HW-11981 / Import Field Setup** – The *Import* wizard's Field Setup auto clip function works as expected.

Mobile

- **HW-11849 / Auto Sync Event Rec** – Syncs only occur when changes to a Rec or Event are made (not when attempting to close a Sampling Event where no changes were made.
- **HW-11942 / SKY Grower Summary - Planting** – The SKY Grower Summary - Planting report was implemented with *Report Options* of *Season*, *Crop*, *Start/End Date*, and *Per Pages Options* for *Grower*, *Farm*, and *Field*.
- **HW-11949 / Batch Manual Events/Rec** – The side panel does not remain open upon saving or canceling Batch Manual Events and Application Recs.
