

Printing Fertilizer Tag Documents in French vs. English

Last Modified on 06/24/2025 9:09 am CDT

When printing Fertilizer Tag documents the Field of the Blend/Plan determines if the tag prints in French or English. If the Field's State is not populated, the Grower's State is used.

More information can be found on additional documents that will print in French [here](#).

For CA provinces, when there is an analysis value greater than 0 for Boron, Chlorine, Copper, Iron, Manganese, Molybdenum, or Zinc, the Caution Statement will default. This is done for both the English and French versions of the statement. Once **Done** is selected on the *Review Fertilizer Tag Information for Ticket* window, text is saved with the Blend Ticket or Plan and will then default the next time it is printed regardless of what Products/nutrients are currently on the ticket.

Review Fertilizer Tag Information for Ticket (567)

Grade	0 - 0 - 0	Total Copper (Cu)	0.00
Total Nitrogen (N)	0	Total Boron (B)	0.00
