## Grain

- **FTM-4399 / Comma Formatting for Readability** – Commas were added to numeric values displayed in grids and list boxes throughout Grain to enhance readability and reduce errors when interpreting large numbers (1000000 as 1,000,000).
- **FTM-4404 / Default Contract Quantity in Mass Edit Utility** – When adding a Purchase Contract through the Mass Edit Split Values utility, the Contract Quantity now defaults based on the selected *Scale Ticket Splits* and Contract Type. This enhancement uses the same defaulting rules as STLM when changing the disposition of a split line, improving efficiency and reducing errors by eliminating the need to manually calculate or enter quantities. Double-click in the *Contract Quantity* field to trigger this default behavior.
