## Accounting

- **FTM-4564 / ACH Multiple Paynames** – When the Customer's *Address 1* is checked as a *Payee* and the check is to be paid by ACH, the information in *Address 1* will default into the address information for the check. If *Pay Via ACH* is unchecked, *Address 1* information will move to the *Paynames* grid.

## Agronomy

### Scale Interface

- **FTM-4477 / Product from Delivery Ticket** – When a Delivery Ticket with only one Product is selected in Agronomy Scale Interface, it will default into the selected *Product* field and proceed as normal. If there are multiple Products, nothing will default. The *<Product>* label can now be double-clicked to open a filtered *Select A Product window* showing only those Products that exist on the ticket. One of these Products can be selected and it will show in the *Product* field.

## Blending

- **FTM-4463 / Canadian Fertilizer Tag** – The following improvements were made to the Canadian Fertilizer Tag:
  - The *Guaranteed Analysis* title is directly above the nutrient breakdown rather than at the top of the page under the grade.
  - If micronutrients of Boron, Chlorine, Copper, Iron, Manganese, or Zinc are used, they are listed in the *Caution Statement*.
  - If MO is in user-defined nutrients, it is listed as well.
  - The Caution Statement is in both English and French.
  - The *Total Sulphur* label is now *Minimum Sulphur* per regulations (French - *Soufre Minimal*).
  - The fertilizer tag includes *Minimum Calcium* or *Minimum Magnesium* in addition to *Minimum Sulphur* (French - *Magnésium Minimal, Calcium Minimal*).
  - In French, Boron is listed as Bore, and P2O5 and K2O are subscripted.

## Grain

### Operations

- **FTM-4479 / STLM Scale Ticket Disposition Date** – When an STLM Scale Ticket split line DPR is set to Priced, the Priced date is captured in the database. This date will be used for the EDI Examhand export for Priced

grain that is not paid (EDI code 35).
