

# Tableau OAuth2 Setup

Last Modified on 06/30/2025 1:07 pm CDT

When using Sharepoint, OneDrive, Azure Data Lake, or Azure SQL Server, as a Tableau datasource, Microsoft is now requiring OAuth2 to be configured. Customers will be required to manage these Azure applications themselves and provide Client ID/Secrets to the SSI Tableau team.

Use this [document](#) to get started.

In the coming months, the Azure Portal will only host Enterprise Applications while [Microsoft Entra](#) will have both Enterprise Applications and App Registrations. If your Tenant has been updated already, please use Microsoft Entra instead.

## Caveats and Notes About Configuration

The following URI redirects must be set:

- [https://tableau.agvancesky.com/auth/add\\_oauth\\_token](https://tableau.agvancesky.com/auth/add_oauth_token)
- <https://tableau.agvancesky.com>

### Web

[Quickstart](#) [Docs](#) 

#### Redirect URIs

The URIs we will accept as destinations when returning authentication responses (tokens) after successfully authenticating or signing out users. The redirect URI you send in the request to the login server should match one listed here. Also referred to as reply URLs. [Learn more about Redirect URIs and their restrictions](#)

[https://tableau.agvancesky.com/auth/add\\_oauth\\_token](https://tableau.agvancesky.com/auth/add_oauth_token) 

[Add URI](#)

Select *Accounts in any organizational directory* when choosing *Supported account types*.

## Supported account types

Who can use this application or access this API?

- Accounts in this organizational directory only (Software Solutions Integrated, LLC only - Single tenant)
- Accounts in any organizational directory (Any Microsoft Entra ID tenant - Multitenant)

Only the user(s) who will be deploying Tableau data source(s) will need to be added to the enterprise application.

Authors who publish these Tableau data source(s) must go into their Tableau account settings and add saved credentials for the selected data source(s).

Saved Credentials for  
Data Sources

Clear All Saved Credentials...
