Grain

Operations

- **FTM-4563 / Address 1 Payee** – On the Settlement's *Paynames* tab, Batch Settle and Pay Interest Only checks have an option to *Suppress "AND" on Checks for Payee from Address 1.* When this option is enabled, if the Grower has *Address 1* marked as a *Payee*, the word *AND* will not print before what is in the *Address 1* field on the check or in the Positive Pay file.

Utilities

- **FTM-4507 / STLM Averaging Grade Factors** – A new option is available when setting up a Dock, Shrink, or Premium/Discount table called *Use Average When Present.* With this option enabled, if the Grade Factor on the Scale Ticket has an *Average Result* (new column in the *Grade Factor* grid), that result will be used to calculate the Dock, Shrink, or Premium/Discount for the Grade Factor. The Mass Edit Utilities (Header Values, Split Values, and Ownership Values) also work the same way with this option. When updating the average Grade Factor value on the Scale Ticket, the Mass Edit Grade Factor Values utility will update the *Average Result* (new column in the *Grade Factor* grid) instead of overriding the *Result* of the Grade Factor. The *Average Result* of the Grade Factor on the Scale Ticket can only be set/changed using the Mass Edit Grade Factor Values utility.

Hub

Setup

- **FTM-4592 / User Role Setting** – A new User Role setting was added so that the *Current Region & Sub-Region* option on *Select Customers* windows does not default as checked. This setting defaults as off.
