

1.4.0 | 10.13.2025

Last Modified on 12/23/2025 2:59 pm CST

Bug Fixes

- **SKYC-3812 / Android Device View** – Spacing has been adjusted to accommodate Android screen elements such as buttons and the camera to ensure a cleaner display.
- **SKYC-3816 / Product Tab** – Issues were identified when adding Single-Location Products, and Product Descriptions were missing on Delivery Tickets. Both are now displayed as expected.
- **SKYC-3685 / Conditions** – Units of measure for Captured Conditions display as expected.

New Features

- **SKYC-3761 / Route Overview Map Enhancements** – A **Map Layers** icon was added to Route Overview for toggling between *Standard Road* and *Satellite views*. The *My Location* blue dot has returned, and the map now loads with a tighter zoom on assigned jobs
- **SKYC-3816 / Product Tab** – When adding a new Product for Blend and Delivery Jobs, new logic has been included for defaulting the Location. The Location can still be edited:
 - If the Product has a single Location, that location will be used.
 - If multiple Locations exist, the job ticket Location is used.
 - If no match is found, the Location must be selected.
- **SKYC-3709 / Remembered Conditions** – When applicable, previously logged condition values will auto-populate on the next job for:
 - Boom Height
 - Nozzle
 - Nozzle Pressure
 - Nozzle Spacing
 - Wind Meter
 - Wind Meter Brand
- **SKYC-3760 / Vision of Comments** – Users can view *Applicator Comments* for Blend Jobs and *Additional Comments* for Blend and Delivery Jobs in the *Job Information* panel at the top of the Overview page.
