Mapping November 2025

Version 5.22

Web

- **HW-12071 / Field Detail Agvance Integration** – A new User Role option called *Agvance Location* is now available under the *Add/Edit Fields* section. When this option is enabled, a new *Agvance Location* drop-down displays above the *Directions* area and includes a full list of all Locations in the Agvance database.
- **HW-12121 / SKY Soil Test Report** – A new drop-down option called *Per Report Options* was added to the SKY Soil Test Report and has options of *Grower*, *Farm*, and *Field*. This enhances visualization of nutrient trends across multiple Fields at the Farm level.
- **HW-12178 / Equation Rec Blends** – Product Rates are stored correctly as expected.
- **HW-12205 / Field Setup CLU** – The current service in Field Setup was replaced with the self-hosted source of CLU boundaries.
- **HW-12250 / Lab Submission Form and Sample Bag Labels Reports** – A new report option was added to the Lab Submission Form and Sample Bag Labels reports called *Include Events with Results*. When enabled, Events with partial or full results are now included. Event selection disables this option and includes all Sampling Events regardless of results status.
- **HW-12267 / Split Screen Compare** – Events converted from Equation Recs display within the Split Screen Compare tool as expected.
- **HW-12305 / Harvest Import** – Harvest data can be imported to create Events as expected.
- **HW-12309 / Import Attributes** – The following Soil Import Attributes were added:
    - K_AAO_lb_ac
    - Ca_AAO_lb_ac
    - Mg_AAO_lb_ac
    - NO3_N_KCL05M_ppm
    - NO3_N_KCL05M_lb_ac
- **HW-12324 / Import Application** – Application data matching to a Blend with service product can be imported to create an Event as expected.

Version 5.21

Web

- **HW-9997 / Import Harvest Ton/Ac** – The Silage Corn data recorded in units of ton/ac can be imported and surfaced as expected.
- **HW-10669 / Import Harvest Planting Application** – Imported Events can now be viewed/edited to fix items

such as *Header Down* set to *False*.

- **HW-11798 / Import Application Chemical Mix** – Validation was added to the *Chemical* tab to keep the *Product Mix* section's **Save** button disabled for Application and Manual Application Rec Events until at least one product (after adding a Service product) has been added.
- **HW-12142 / Auto Email Import Sampling** – The Auto Email Import - Sampling process works as expected.
- **HW-12143 / Import Application Add/Edit Blends** – Adding or editing a Fertilizer blend on imported Application data updates the individual product rates to equal the total blend mix rate as expected.
- **HW-12207 / Equation Recs K Rec** – Crediting a K Rec surface results in an accurate surface when paired with a Lime Rec as expected.
- **HW-12286 / Soil Sample Results Reports** – Soil Sample Results - Auto Create sends an email notification when *Email* is unchecked in the *Notification Settings* area within *Preferences* when Auto Create Reports is set up as expected.
- **HW-12298 / Planting Rec** – The **Reset** and **Union Zone** tools work as expected.
- **HW-12300 / Sampling Grid** – The *Sampling* grid can be rotated and moved multiple times and displays as expected.

Mobile

- **HW-12241 / Reporting** – Creating multiple report types handles older and newer API reports as expected.
- **HW-12259 / Water Sampling** – Adding/Editing a Water Sampling Event works as expected and displays the correct Sample date.
