

Mapping December 2025

Last Modified on 12/23/2025 10:21 pm CST

Version 5.24

Web

- **HW-9147 / Implement Management Area Import** – A *Management Area* option is now available under the *File Type* drop-down on the *Import* tab. Each of the Management Areas has a strip with the *Customer*, *Farm*, *Field*, and *Season*. An *Analysis Layer Management* area has also been created for each of the strips. Each Analysis Layer's context menu has options to *Delete Analysis Layer*, *Print Layer*, *Create Using Rec*, and *Create Using Event*. An *Edit Layer Properties* option exists to change Attributes and the Color Ramp.
- **HW-11905 / Import Harvest/Application/Planting** – Creating Harvest Events works as expected when encountering special characters.
- **HW-12072 / Application Event/Rec** – When the rate or unit of any Product mix is updated, all other zones using the same Product are updated simultaneously. This applies to manual Application Events and Recs.
- **HW-12299 / Map Tools Search** – Event ID search performance was improved at the owner level for large owners.
- **HW-12312 / Equation Rec Surfacing** – Support was added for additional micronutrients (cobalt, nickel, silica) as well as for miscellaneous nutrients as well as *Other*.
- **HW-12322 / Loadsheets Field Summary Report** – The Loadsheets *Field Summary* page now includes page breaks. In scenarios where data goes beyond the page, that information will continue onto a subsequent page.

Version 5.23

Web

- **HW-8842 / Search Tool PLSS** – The PLSS Search tool works as expected and the Principal Meridian value is appended to the *Section* drop-down when multiple medians exist per state.
- **HW-11041 / Import Planting Seeding Rate** – Importing Planting Events works as expected and a per variety *Seeding Rate Unit* drop-down to the Crop Info area on the Planting import with a default of *seed/acre*.
- **HW-11872 / Field Setup Agvance Integration** – The following improvements were made to Field Bill Split details:
 - The current detail was removed from under the *Billing Split Details* section on the Field Profile.
 - The Field Billing Split in Agvance is displayed in SKY Mapping.
 - The Customer name and up to three split arrangements are listed (S-1, S-2, S-3).
 - Hovering over the split names provides the full text of each split arrangement (S-1 is always Standard Arrangement).

- The **Add Agvance Customer for Split** link below each Customer can be used to include additional Customers in the split (up to eight Customers can be included). Additional Customers can also be removed from the split.
- When additional Customers are added, each of the S-# columns recalculate to total 100%.
- **HW-12055 / Export Controller Creating Rec** – Equation Recs created using Layers work as expected.
- **HW-12228 / Import Sampling Report ID** – Support was added for the ReportID and LabReportID to CSV files to allow field mapping of these columns within the Template Manager. The first recorded per Event ID can be used for the LabReportID per Event.
- **HW-12317 / Import Harvest/Planting** – Creating Harvest Events works as expected.
- **HW-12335 / Import Boundary** – Field boundaries containing duplicate vertices exported from Agvance Mapping can be imported as expected.
- **HW-12337 / Equation Rec Rx File** – Rx File(s) apply Credit on Equation Recs as expected.

Mobile

- **HW-12356 / Lab Submission Form/Sample Bag Labels** – A new *Report Option* was added to the Lab Submission Form and Sample Bag Labels reports called *Include Events with Results* which defaults to off.
