Razor Tracking - SKY Dispatch

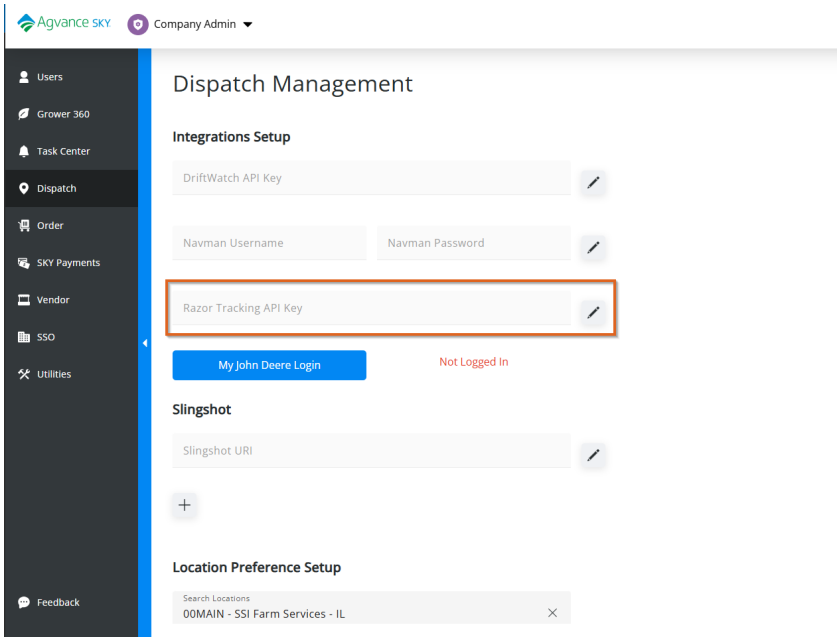

Last Modified on 07/07/2026 9:18 am CDT

Razor Tracking gives the ability to view real-time location data for Razor-equipped vehicles directly on the Agvance SKY Dispatch and Agvance Ops maps. By bridging third-party tracking with Agvance, this integration ensures dispatchers can monitor fleet movement and job status in a unified interface.

Setup in Agvance SKY Admin

An administrator must first enable the integration by entering the required API credentials.

1. Navigate to *Agvance SKY Admin / Dispatch*.

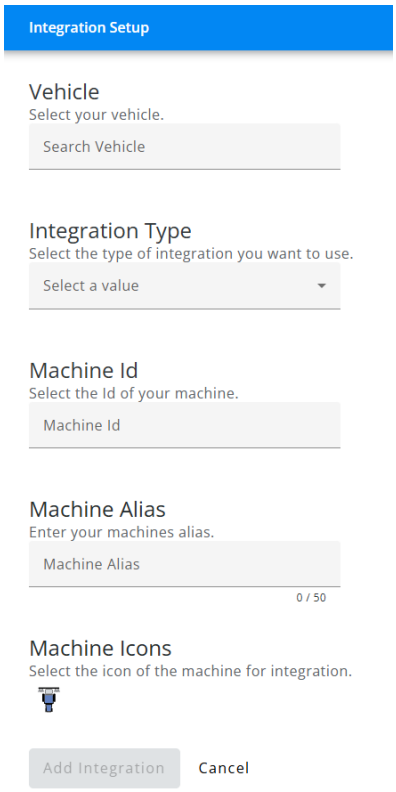

2. In the *Integrations Setup* section, enter the *Razor Tracking API Key*.
3. Select the **Edit** icon to save the key.

Setup in Agvance SKY Dispatch

Once enabled in Agvance SKY Admin, individual assets must be linked to Vehicles in *Company Settings*.

1. Navigate to *Agvance SKY Dispatch / Company Settings / Integrations*.
2. Select **+ Add Integration**.
3. Complete the setup fields:
    - **Vehicle** – Select the Vehicle to link.
    - **Integration Type** – Select *Razor Tracking*.
    - **Machine ID** – Select the unique identifier of the Razor asset.
    - **Machine Alias** – This defaults as *Machine ID* but can be edited.

- **Map Icon** – Choose a visual icon to represent the asset.

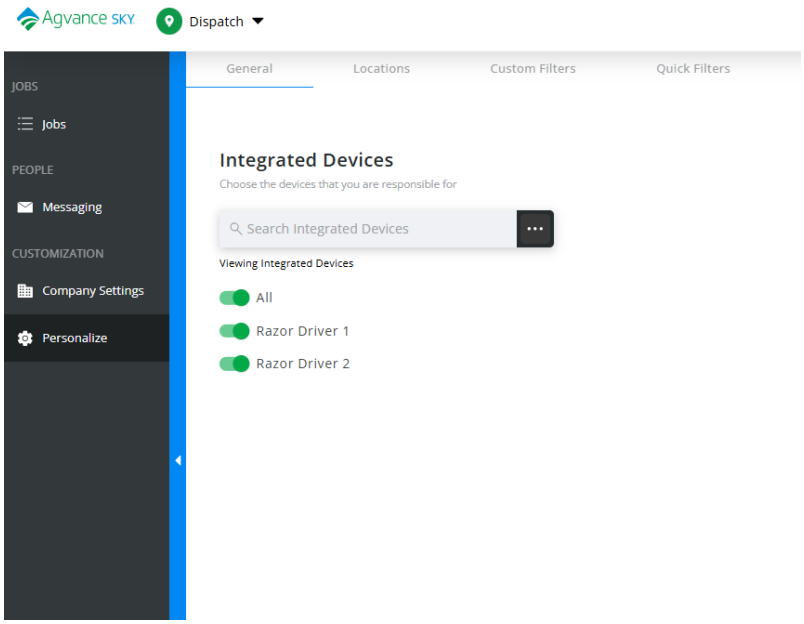

4. Choose **Add Integration** to complete connection.

Personalize Settings

Control the visibility of integrated devices on map view through the *Personalize* tab.

1. Select *Personalize* from the menu.
2. On the *General* tab, locate the *Integrated Device* section.

3. Turn on Razor Tracking to display on the map.

Map View

Tracked assets, identified by their chosen *Icon* and *Machine Alias*, appear on the Agvance SKY Dispatch map when the *Integrations* option is enabled in the map options. Right-click any asset icon on the map to view the timestamp of its last reported location.
