

Booking Table Changes

Last Modified on 01/30/2026 11:58 am CST

In the coming months, some key fields will be removed from several child tables of the book table as enhancements are made to the database architecture. These changes will affect the way tables are joined together - specifically which fields they should now be joined on. The following is a list of affected tables and the new join logic.

BookSplit

InvNum, Location, and InvoiceDate will be removed from the BookSplit table, so any of those fields (including table joins) in the data source should be changed.

Do Not Use	Replace With
Booksplit.invnum	Book.invnum
Booksplit.location	Book.location
Booksplit.invoicedate	Book.invdate
<i>Proper join: Book.bookguid = booksplit.bookguid</i>	

BookLi

InvNum, Location, InvoiceDate, and CUSTID will be removed from the BookLi table, so any use of those fields (including table joins) in the data source should be changed. Additionally, any join of the Grower table to BookLi should be changed to join the Grower table to BookSplit on BookSplit.CUSTID = Grower.GROWID

Do Not Use	Replace With
BookLi.InvNum	Book.invnum
BookLi.Location	Book.location
BookLi.InvoiceDate	Book.invdate
BookLi.CUSTID	BookSplit.CUSID
<i>Proper joins:</i> <i>Book.bookguid = booksplit.bookguid</i> <i>BookSplit.booksplitguid = BookLi.booksplitguid</i>	

BookAnal

InvNum, Location, and InvoiceDate will be removed from the BookAnal table, so any use of those fields (including table joins) in the data source should be changed.

Do Not Use	Replace With
BookAnal.InvNum	Book.invnum
BookAnal.Location	Book.location
BookAnal.InvoiceDate	Book.invdate
<i>Proper joins: Book.bookguid = BookAnal.bookguid</i>	

BookPlan

BookNumber, BookLocation, and BookDate will be removed from the BookPlan table, so any use of those fields (including table joins) in the data source should be changed.

Do Not Use	Replace With
BookPlan.BookNumber	Book.invnum
BookPlan.BookLocation	Book.location
BookPlan.BookDate	Book.invdate
<i>Proper joins: Book.bookguid = BookPlan.bookguid</i>	

InvBooks

TicketNumber, TicketLocation, TicketDate, TicketCustId, and TicketLineItem will be removed from the InvBooks table, so any use of those fields (including table joins) in the data source should be changed.

Do Not Use	Replace With
InvBooks.TicketNumber	Book.invnum
InvBooks.TicketLocation	Book.location
InvBooks.TicketDate	Book.invdate
InvBooks.TicketCustId	BookSplit.CUSTID
InvBooks.TicketLineItem	BookLi.LINEITEM
<p><i>Proper joins:</i></p> <p><i>BookLi.bookliguid = InvBooks.bookli.guid</i></p> <p><i>Bookli.booksplitguid = booksplit.booksplitguid</i></p> <p><i>Book.bookguid = booksplit.bookguid</i></p>	

SeedOrderDt

Bookinvnum, BookLocation, and BookInvDate will be removed from the InvBooks table, so any use of those fields

(including table joins) in the data source should be changed.

Do Not Use	Replace With
SeedOrderDt.Bookinvnum	Book.invnum
SeedOrderDt.BookLocation	Book.location
BookInvDate	Book.invdate
<div>Proper joins:</div> <div>BookLi.bookliguid = SeedOrderDt.bookliguid</div> <div>Bookli.booksplitguid = booksplit.booksplitguid</div> <div>Booksplit.bookguid = book.bookguid</div>
