- **SV-2419 / Container Activities** – When performing a Container Activity, *Tamper Evident Device #s* and *Notes* are being saved.
 - **Why** – This ensures information from the Container Activity is saved.
 - **When/Where** – *Notes* will be saved in the database but not returned on the Activity the next time it is performed. The *Tamper Evident Device #* WILL be returned the next time the activity is performed.
 - **Action Needed** – No action required.
- **SV-2313 / Inventory Add Delivery Ticket** – Delivery Tickets can be quickly added from the *Available for Sale* screen in *Inventory* after verifying Product is available.
 - **Why** – This functionality was available in the original Warehouse app.
 - **When/Where** – When viewing the *Available for Sale* screen, an option is available to add a Delivery Ticket.
 - **Action Needed** – No action required.
- **SV-2470 / Delivery Ticket +/- and Number Pad** – When entering quantities on a Delivery Ticket, a number keypad displays as well as a +/- button to change the quantity to positive or negative.
 - **Why** – This allows quantities to be entered more efficiently.
 - **When/Where** – The keypad can be seen when entering quantities on a Delivery Ticket. The +/- button was specifically added to the *Requested Quantity* and *Amount Picked* fields.
 - **Action Needed** – No action required.
- **SV-2408 / Barcode Scanning** – When scanning a concatenated barcode when adding or editing a Delivery or BOL, the Lot Number auto-populates.
 - **Why** – This makes barcode scanning more efficient.
 - **When/Where** – The Lot Number will default when scanning a barcode when adding/editing Deliveries and BOLs.
 - **Action Needed** – No action required.
