

SendGrid Account Setup

Last Modified on 02/02/2026 3:23 pm CST

Use the following instructions to set up a SendGrid account.

1. Go to the [SendGrid](#) homepage.
2. Choose **Start for free**.

Note: SendGrid is free for 60 days.

3. Fill out the sign up form using a company *Email address*. The password can be different than the one used for the email account. Signing up with a Gmail account is an option if the company is using that email service. Selecting Sign up with Google navigates to a new page to choose the appropriate Gmail account.

Note: An email will be sent from SendGrid to the email address used here to verify the account.

Start your free trial today to test out the Twilio platform with no strings attached:

- ✓ No credit card required
- ✓ Free trials available
- ✓ Access to all products across the Twilio platform

Get up and running:

- ✓ Verify your email address & phone number
- ✓ Tell us what you want to build first
- ✓ Start building!

*Free trials may be limited by time, features, and usage caps, and are subject to change without notice.

4. Choose **Continue**, then enter a *Phone Number* for two-factor authentication (2FA). The code can be sent via

SMS or a voice call.

We'll also need to verify your phone number

-  So you can hit the ground running and start using our **Twilio services**.
-  To verify you during log in through **two-factor authentication (2FA)**.
-  To help us **mitigate fraud and abuse**.
-  To determine your **billing country** (you can change this on the next step)

Country X Phone Number

[Send code via SMS](#) [Send code via voice call](#)

5. Enter the *Recovery code*, which can be used as a failsafe if access to the 2FA device is lost. **BE SURE TO KEEP THIS CODE IN A SAFE LOCATION.** Download the code as a text file, or copy it to another location. Ensure it's saved somewhere safe and accessible in case it is ever needed.

You're all verified!

If you lose your phone, or don't have access to your verification device, this code is your failsafe to access your account.

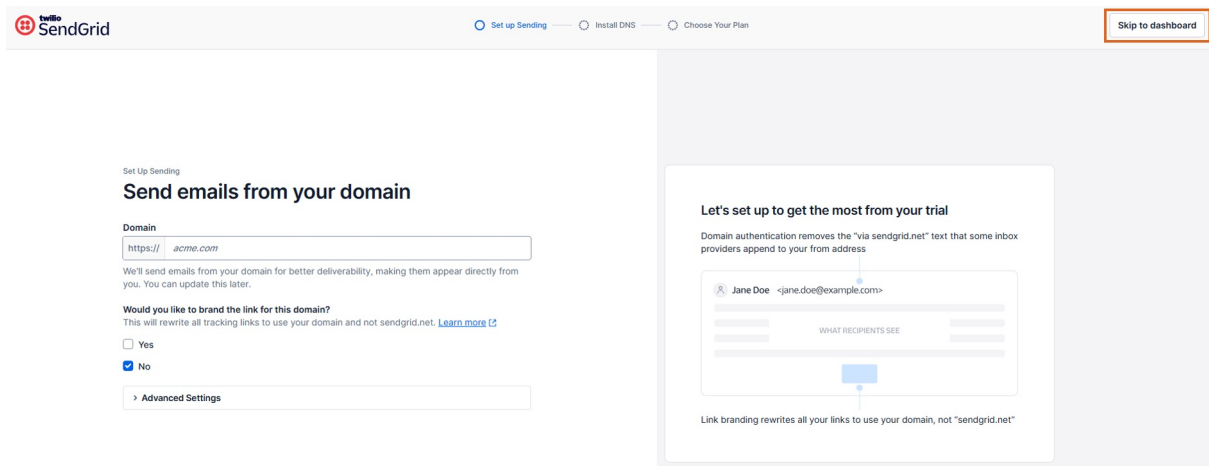

Recovery code  

 Save this code somewhere safe and accessible

[Continue](#)

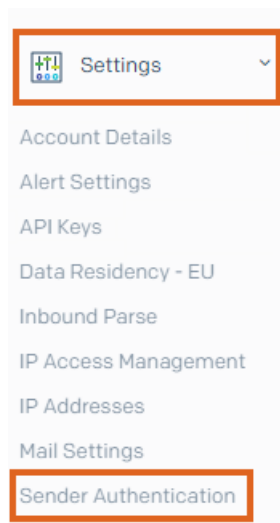

6. The next screen that displays is optional, giving the ability to *Send emails from your domain*. This can be set up later by choosing **Skip to dashboard**.

The screenshot shows the Twilio SendGrid dashboard with a progress bar at the top: "Set up Sending" (selected), "Install DNS", and "Choose Your Plan". A "Skip to dashboard" button is highlighted in the top right corner. The main content area is titled "Send emails from your domain" and includes a "Domain" field with "https:// acme.com" entered. Below this, there is a section "Would you like to brand the link for this domain?" with "No" selected. An "Advanced Settings" link is also visible. To the right, a callout box titled "Let's set up to get the most from your trial" explains domain authentication and link branding, showing an email header example: "Jane Doe <jane.doe@example.com>" and a diagram illustrating how link branding rewrites links to use the domain instead of "sendgrid.net".

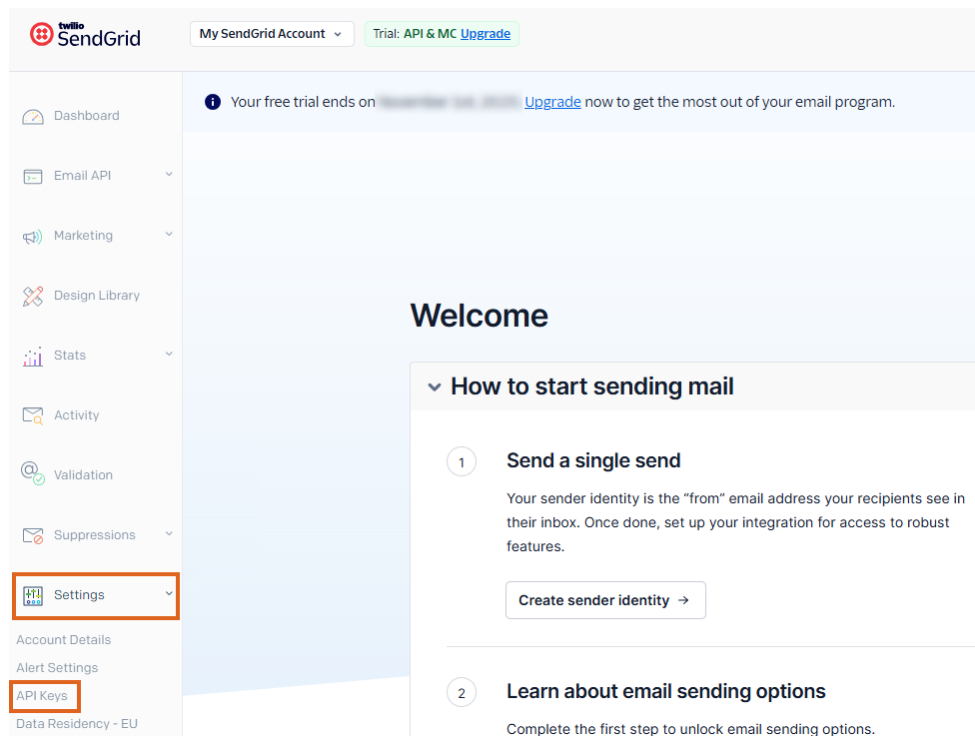

7. If **Skip to dashboard** is selected, it is necessary to go into the settings and verify a single sender using the following steps:

- a. Log into the account already set up.
- b. Go to *Settings / Sender Authentication / Verify a Single Sender*.

- c. Add the exact *From* email address. The address must be an exact match, or it will not send.
- d. Complete the email verification sent to the *From* email address. Be sure to check Spam folders if it does not go directly to the Inbox.

8. Upon accessing the dashboard, create an API key by going to *Settings / API Keys*.

9. Choose the **Create API Key** button. Enter an *API Key Name* (like *email*) and choose the preferred *API Key Permission* (*Full Access, Custom Access, or Billing Access*). Select **Create & View**.

Create API Key

API Key Name •
key ⓘ

API Key Permissions • ⓘ

 **Full Access**
Allows the API key to access GET, PATCH, PUT, DELETE, and POST endpoints for all parts of your account, excluding billing and Email Address Validation. Some services will be disabled when using an EU subuser.

 **Custom Access**
Customize levels of access for all parts of your account, excluding billing and Email Address Validation.

 **Billing Access**
Allows the API key to access billing endpoints for the account. (This is especially useful for Enterprise or Partner customers looking for more advanced account management.)

10. Save the key by copying and pasting into a text document with Notepad (or similar application). This is the only time this code will be shown, so make sure it is saved before leaving this screen.

API Key Created

Please copy this key and save it somewhere safe.

For security reasons, we cannot show it to you again

11. When revisiting the SendGrid website, enter the credentials set up earlier to access the dashboard.
