Accounting

A/R

- **FTM-4914 / Zero Dollar Payment** – When making a payment and checking *Use U/A Cash*, unchecking, then saving, the Payment saves correctly.
    - **Why** – Originally, the Payment was saving with a zero dollar amount in the *Pay Method* grid. The Payment was posted to the Customer's account, but the Overall AR and G/L Receivables balance showed an out of balance on the Checkup due to the zero Journal Entry.
    - **When/Where** – The General Journal Entry created from the Payment made as described above shows the Payment amount rather than all zeros.
    - **Action Needed** – No action required.
- **FTM-4903 / Bookings with Apostrophes** – When there are apostrophes in the Product Name, regular Comments, or Additional Comments on Bookings, the apostrophe is no longer duplicated.
    - **Why** – This change updates how apostrophes are stored and displayed in the Product Name, regular Comments, and Additional Comments to prevent unintended character duplication.
    - **When/Where** – This is applicable any time text is entered containing an apostrophe in the areas mentioned above.
    - **Action Needed** – No action required.

Grain

Grain Scale Interface

- **FTM-4127 / Message Boards/RFID Readers** – A *Lane* field was added to the setup of a Message Board and RFID Reader to tie them together. This setup is only used for RFID Readers set as *Auto Start Reader*.
    - **Why** – This gives the ability to auto start messages on each scale's respective Message Board without affecting the other scale/Message Board.
    - **When/Where** – This new field can be seen on the Message Board and RFID Reader setup screens at *Grain Scale Interface / Setup / Message Boards / Message Board* and *Grain Scale Interface / Setup / RFID / Readers*.
    - **Action Needed** – When setting up an Auto Start RFID Reader and Message Board that should be tied together, enter the same *Lane* for both. Lanes must be unique per pairing.
