1.6.0 | 03.12.2026

Bug Fixes

- **SKYC-3992 / Multi-field Ticket Completion**– When completing the final job of a multi-field ticket, the ticket will no longer be updated with the final job's products and rates.
  - **Why** – Previously, the final job could overwrite the ticket's product and rate information.
  - **When/Where** – When completing the final job of a multi-field ticket.
  - **Action Needed** – No action required.
- **SKYC-3967 / Conditions Date Selector**– When editing system-generated dates within the *Conditions* tab, the date selector now defaults to the condition's saved value.
  - **Why** – The date selector previously defaulted to the current system date rather than the saved condition date.
  - **When/Where** – When editing system-generated dates within the *Conditions* tab.
  - **Action Needed** – No action required.
- **SKYC-3927 / Android Users without Update Inventory Permission** – Android users with all permissions enabled except Update Inventory can complete jobs as expected.
  - **Why** – A permissions conflict previously caused the job completion process to fail.
  - **When/Where** – When Android users attempt to complete a job without the *Update Inventory* permission enabled.
  - **Action Needed** – No action required.

New Features

- **SKYC-3808 / Application Zone Distinction Improvement** – Updates were completed to improve the red-line hashing indicating non-application zones. Hashing should flow continuously across polygons and boundaries.
  - **Why** – Hashing previously appeared inconsistent across polygon boundaries.
  - **When/Where** – When viewing non-application zones on job maps.
  - **Action Needed** – No action required.
- **SKYC-3944 / Tender Driver Notifications** – Tender Drivers now receive device notifications when job assignments are updated.
  - **Why** – Tender Drivers previously had limited visibility into assignment changes without manually refreshing.
  - **When/Where** – When Tender Drivers are logged into the Agvance Ops.
  - **Action Needed** – No action required.
- **SKYC-3866 / Samsara Integration on Map** – Samsara devices linked to Agvance Vehicles in SKY Dispatch will now display on the Full Page Map.

- **Why** – Samsara vehicle information was not previously visible within Agvance Ops maps.
- **When/Where** – When Samsara devices are linked to Vehicles within SKY Dispatch.
- **Action Needed** – No action required.

- **SKYC-3998 / Tender Driver Non-Field Features Map Layer** – Non-field SKY Mapping features are now available for Tender Drivers on the Job Overview Map and Full Page Map.
  - **Why** – These mapping layers were previously unavailable for Tender Drivers.
  - **When/Where** – When Tender Drivers view maps within Agvance Ops.
  - **Action Needed** – No action required.

- **SKYC-3978 / Line Non-Field Features** – Line type features are now included with polygons and pins when displaying non-field features..
  - **Why** – Line-based features were not previously supported.
  - **When/Where** – When viewing non-field features within SKY Mapping layers.
  - **Action Needed** – No action required.

- **SKYC-3952 / VRT Label** – A new label will display within the Field information on the *Overview* tab of Variable Rate tickets.
  - **Why** – Users previously had limited visual indication that a ticket was configured for variable rate application.
  - **When/Where** – When viewing field information for Variable Rate tickets.
  - **Action Needed** – No action required.

- **SKYC-4032 / Offline Mode Improvements** – Updates have been made to improve data fetching and storage prior to entering Offline Mode, improving user experience in areas with no connectivity.
  - **Why** – Some job data could previously fail to fully load before a device lost connectivity.
  - **When/Where** – When entering or operating in Offline Mode.
  - **Action Needed** – No action required.
