

Energy Force Transfer Comparison Dashboard

Last Modified on 07/17/2026 3:11 pm CDT

Purpose

The Energy Force Transfer Comparison dashboard is designed to assist in reconciling inventory transfers between Energy Force and Agvance. Because inventory transfers are entered manually in both systems, discrepancies can occur when a transfer is recorded in one system but not the other.

Details

The Date Range can be used to limit the analysis to a specific period. All metrics and detail tables on the dashboard are updated based on the selected range.

At the top of the dashboard, summary metrics display the total transferred gallons recorded in each system for the selected date range. Differences between those totals may indicate that transfers were not entered into one of the systems or require further review.
