eBusiness Setup

The screenshot shows the 'eBusiness Setup' window. The 'Product Cross References' section contains a table with the following data:

	Code Type	Attribute
1	AGIIS-ProductID	(Product GTIN)
2	UPC	Product UPC
3	AssignedBySeller	Winfield ID
4		

Below this table, there are sections for 'Customer Cross References' and 'Supplier Cross References', each with a table for mapping code types to attributes. To the right, the 'Default Code Types' section shows 'Product' set to 'AGIIS-ProductID'. The 'Product Unit of Measure' section shows 'UOM' set to 'UOM'. At the bottom right, there are 'Save' and 'Cancel' buttons.

Location

Location GLNs should be verified with any/all suppliers before attempting connectivity.

B2B / Setup / eBusiness in the *Value* column of the *Locations* grid with the respective Agvance Location

The screenshot shows the 'eBusiness Setup' window with a 'Locations' grid. The grid has columns for Location, Code Type, Value, <Cust ID>, Alt. Code Type, and Alt. Value. The first three rows are populated with data, and the fourth row is empty. The 'Value' column contains GLN values. The 'Alt. Value' column contains an alternative GLN value for the first location.

Buttons: Save, Cancel

- **Location** – Agvance Location that represents connectivity
- **Code Type** – AGIIS-EBID
- **Value** – GLN for the Location using connectivity.
- **Cust ID** – This is used with seed orders.
- **Alt. Code Type** – AGIIS-EBID
- **Alt. Value** – Used to accommodate multiple GLNs or GLN conflicts.

Note: By default, the system uses the information set in the *Values* column across all B2B processes unless *Use Alt. Location Code* is selected. The *Alt. Value* cannot be used with Bayer GPOS.
