

AGIIS Web Services Setup - Supplier eLink

Last Modified on 10/22/2026 2:53 pm CDT

The AG Industry Identification System (AGIIS) Directory is a database system housing agricultural e-business data for industry subscribers. The AGIIS Customer Web Service allows Agvance users who subscribe to the AGIIS Directory access to the directory and the ability to download Grower and/or Product information. The web service returns demographic information as well as industry identifiers used in e-business transactions.

A subscription to the AGIIS Directory is required to access the information. SSI will provide the Enrollment Form to the potential subscriber. After subscribing to the AGIIS directory, the retailer will be issued a username and password to access the directory.

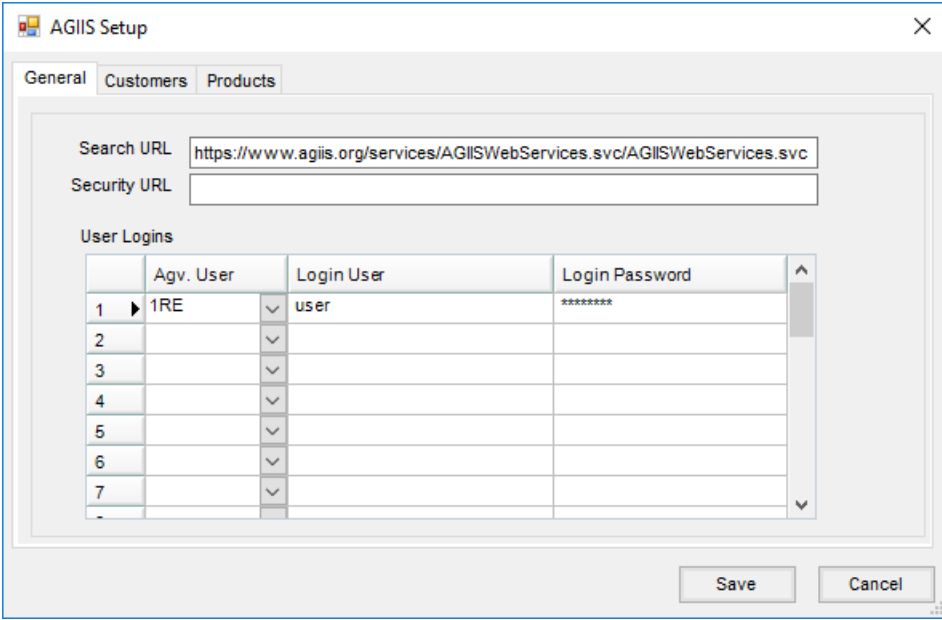

AGIIS Setup

1. Navigate to *Hub / Setup / Company Preferences*. Select **AGIIS Setup**.

The screenshot shows the 'Preferences' dialog box with the 'General' tab selected. The 'AGIIS Setup' button is highlighted with a red rectangle. The 'Mail Host' section contains fields for 'Mail Host' (smtp.office365.com), 'Port' (587), and 'Use SSL' (checked). The 'Mail Host Email' section contains fields for 'Address' and 'Password'. The 'Web API Database Connection Information' section contains a field for 'API Database ID' and buttons for 'Set Database ID' and 'Activate Mobile Sales'. The 'Filter Invalid Databases' checkbox is checked. The 'Prop 65 Cancer Warning Statement' and 'Prop 65 Developmental Warning Statement' sections contain text boxes with placeholder text. The 'AGIIS Setup' button is located at the bottom left of the dialog.

2. On the *General* tab of *AGIIS Setup* window, enter <https://www.agiis.org/services/AGIISWebServices.svc/AGIISWebServices.svc> in the *Search URL* field.
3. In the *User Logins* section, select the *Agvance User ID* and enter the retailer's AGIIS username and password for each User who will access the AGIIS Directory.

Note: Multiple Agvance Users can be listed under the same AGIIS username and password.

- On the *Customers* tab, double-click to select the *GLN Attribute* used to store the **Customer's GLN** (Global Location Number), which is an additional method of identifying producers in the Ag industry.

Note: The *EBID* and *NAPD Attributes* are not used at this time.

- The *Products* tab is optionally used if searching the AGIIS directory for Product information. However, using **Agvance Data Link** is the preferred method of updating Product information.

Company EBID/IC Code

Navigate to *Hub / Setup / Company*, and enter the *Retailer IC Code* (parent location GLN as designated by supplier) associated with the AGIIS subscription.

Note: Contact SSI for the password to access this window.
