

Agvance Mapping

Decision Support
for Precision Ag

Use Agvance Mapping to provide the best advice on every aspect of the customer's precision farming operation. Mapping provides an easy-to-use web interface and leverages the power of cloud computing to provide the answers to your customers' most challenging questions.

The Agvance SKY Mapping mobile app for in-field tasks puts versatility right in your hands. Soil sampling, scouting, and other field events can be

created while in the field. Sampling events can be started in the web app or created entirely in the mobile app. Data is automatically synced between the web and mobile app.

Print reports and assemble report books to share your recommendations. Keep your growers engaged by providing access to their maps and data through the SKY grower portal.

WORK WITH AGVANCE

- Share maps, recommendations, plans, and more with cloud-based data storage
- Use your current customers and fields that are already in your Agvance system
- Create a plan or a blend from a mapping recommendation and from there dispatch the blend ticket that includes the area to be applied
- Access from a desktop or a mobile web browser using Google Chrome

IMPORT/EXPORT DATA

- Import field boundaries from shapefiles
- Import test results
- Export single field or company-wide field boundaries to shapefiles
- Import and convert over 80 proprietary file formats

CREATE FIELD DATA

- Create normalized analysis and profit loss analysis layers
- Create field events for applications, harvest, irrigation, sampling tissue, scouting, and tillage
- Customize with advanced drawing tools
- View boundaries to create field data and filter to view select boundaries
- Track field acres
- Sample soil by points or zones with composites

MAKE DATA-DRIVEN RECOMMENDATIONS

- Create crop-specific recommendations using test results or yield data from one or multiple years
- Create recommendations across multiple growers simultaneously
- Adjust recommendations by percentage, flat rate, or grower budget
- Create variable rate seeding recommendations

SHARE REPORTS AND ANALYZE COMPARISONS

- Brand reports with company logos
- Display 2 to 4 data layers in a split-screen comparison
- Print variable reports such as yield maps, soil type maps, soil tests, recs, crop planning and applications reports
- Assemble report books to allow customers to make sound decisions about their farm or field
- Export reports to PDF, print, email or display for the grower in the Resource section of Grower360

USE THE AGVANCE SKY MAPPING MOBILE APP

- Download the app to iOS tablets and phones
- Track or manually add field boundaries
- Create soil sampling, scouting, and other field events
- Scan QR codes to link soil sample bags to the sample number
- Access the app and enter information even without a good connection and sync later
