

SKY Warehouse

Manage Inventory with Efficiency & Accuracy

SKY Warehouse uses mobile technology to manage inventory and containers efficiently and accurately in agronomy warehouses and agricultural retail stores.

Real-time access to inventory levels and customer orders lets you know what you have and what you need.

Quickly fulfill orders, receive product, and perform physical inventory via scanners to eliminate costly mistakes and take your customer service to a higher level.

INBOUND SHIPMENTS RECEIVED

- Create or edit bills of lading adding products, quantity, lot numbers, and containers
- Receive products by location
- Scan barcodes using device cameras or Bluetooth
- Receive Electronic Delivery Notices (EDNs) from vendors on a new Bill of Lading, automatically importing products and quantities, and populating the Product Lot Number
- Choose from two inbound receiving styles and accommodate either an agriculture location or a retail store
- Tie a purchase order to a bill of lading

OUTBOUND SHIPMENTS LOADED

- Create new delivery tickets or pick and load product on existing delivery tickets
- Add splits with up to 8 customers when adding new delivery tickets. View splits (customers/percentages) when editing delivery tickets
- Edit or view delivery tickets by scanning a printed delivery ticket or scan a customer barcode to see all tickets for the customer
- Assign staff associated with delivery tickets and edit, view, sort or designate fulfillment of orders by user
- Assign containers and select or add lot numbers from a list of options
- Calculate product available for sale
- View and print safety documents, permits for restricted products, expiration dates, and notes
- Capture customer signatures on a tablet, phone, or delivery ticket
- Create intercompany transfers from Ship From on tickets
- Process a full credit check including credit limits, credit status, past due invoices, and credit line checking and identify customers in warning ranges or exceeding limits and stop the transaction or allow after entering a reason or password
- Choose to require users to scan the barcode of the product they are picking to ensure they are loading the correct product when editing a delivery ticket
- Create new delivery tickets for products that are not loaded for the total amount of original order, if needed

INVENTORY IN REAL-TIME

- Track inventory quantities that are Available for Sale by product and location
- Record physical inventory counts by selecting a product or scanning a barcode and multiple staff can add or update product quantities
- Adjust quantity at the time of loading for returns or reassignment of inventory
- Display on hand, available for sale, on order, unused booked, and undeliverable quantities and costs
- Update or add barcodes for products

REFILLABLE CONTAINER MANAGEMENT

- Search or scan a barcode to locate the container
- Record real-time container activities, including receiving, filling, unloading, inspections, cleanouts or maintenance, to comply with refillable container requirements
- Record activity dates, times, notes, products, quantities and passed tests

ADDITIONAL FEATURES

- Access the app from iOS or Android phones and tablets
- Create lists of favorite products, customers, users and locations for easy access
- View customer contact information and dial from cellular devices
- Search products by name, barcode, favorites, lot number, or GTIN
